**Qualifier Notes:**

None

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Certificate of Analysis

### Wood Environment & Infrastructure (Thorold)

110 Jame Street Suite 301  
St. Catharines, ON L2R 7E8  
Attn: Kelly Patterson

Client PO:  
Project: OESAM2008/2000  
Custody: 129982

Report Date: 31-Dec-2020  
Order Date: 22-Dec-2020

**Order #: 2052104**

This Certificate of Analysis contains analytical data applicable to the following samples as submitted:

Parcel ID	Client ID	Parcel ID	Client ID
2052104-01	BH-07-2-D		
2052104-02	BH-07-3-C		
2052104-03	BH-07-4-D		
2052104-04	BH-07-6-D		

Approved By:

Dale Robertson, BSc  
Laboratory Director

Certificate of Analysis

Report Date: 31-Dec-2020

Client: Wood Environment &amp; Infrastructure (Thorold)

Order Date: 22-Dec-2020

Client PO:

Project Description: OESAM2008/2000

**Analysis Summary Table**

Analysis	Method Reference/Description	Extraction Date	Analysis Date
Conductivity	MOE E3138 - probe @25 °C, water ext	23-Dec-20	23-Dec-20
PCBs, total	SW846 8082A - GC-ECD	21-Dec-20	23-Dec-20
pH, soil	EPA 150.1 - pH probe @ 25 °C, CaCl buffered ext.	22-Dec-20	23-Dec-20
PHC F1	CWS Tier 1 - P&T GC-FID	22-Dec-20	22-Dec-20
PHCs F2 to F4	CWS Tier 1 - GC-FID, extraction	22-Dec-20	23-Dec-20
REG 153: Metals by ICP/MS, soil	EPA 6020 - Digestion - ICP-MS	23-Dec-20	23-Dec-20
REG 153: PAHs by GC-MS	EPA 8270 - GC-MS, extraction	21-Dec-20	23-Dec-20
REG 153: VOCs by P&T GC/MS	EPA 8260 - P&T GC-MS	22-Dec-20	22-Dec-20
SAR	Calculated	30-Dec-20	31-Dec-20
Solids, %	Gravimetric, calculation	22-Dec-20	23-Dec-20

Certificate of Analysis

Report Date: 31-Dec-2020

Client: Wood Environment &amp; Infrastructure (Thorold)

Order Date: 22-Dec-2020

Client PO:

Project Description: OESAM2008/2000

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

**Criteria:**

Client ID	Analyte	MDL / Units	Result	Reg 153/04 (2011)-Table 1 Residential/Industrial
BH-07-2-D	SAR	0.01 N/A	5.09	<b>2.4</b> N/A
BH-07-2-D	Conductivity	5 uS/cm	1690	<b>0.57</b> mS/cm

**Qualifier Notes:**

QC Qualifiers :

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Certificate of Analysis

### Wood Environment & Infrastructure (Thorold)

110 James Street Suite 301  
St. Catharines, ON L2R 7E8  
Attn: Kelly Patterson

Client PO:  
Project: OESAM2008/2000  
Custody: 56363

Report Date: 19-Jan-2021  
Order Date: 13-Jan-2021

**Order #: 2103308**

This Certificate of Analysis contains analytical data applicable to the following samples as submitted:

Paracel ID	Client ID
2103308-01	BH-P01
2103308-02	BH-P02
2103308-03	Dup WA

Approved By:

Alex Enfield, MSc  
Lab Manager

Certificate of Analysis

Report Date: 19-Jan-2021

Client: Wood Environment & Infrastructure (Thorold)

Order Date: 13-Jan-2021

Client PO:

Project Description: OESAM2008/2000

**Analysis Summary Table**

Analysis	Method Reference/Description	Extraction Date	Analysis Date
PHC F1	CWS Tier 1 - P&T GC-FID	15-Jan-21	18-Jan-21
PHCs F2 to F4	CWS Tier 1 - GC-FID, extraction	18-Jan-21	19-Jan-21
REG 153: Metals by ICP/MS, water	EPA 200.8, ICP-MS	15-Jan-21	15-Jan-21
REG 153: VOCs by P&T GC-MS	EPA 624 - P&T GC-MS	15-Jan-21	18-Jan-21

Certificate of Analysis

Report Date: 19-Jan-2021

Client: Wood Environment &amp; Infrastructure (Thorold)

Order Date: 13-Jan-2021

Client PO:

Project Description: OESAM2008/2000

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, (), applies to medium and fine textured soils.

**Criteria:**

Client ID	Analyte	MDL / Units	Result	Reg 153/04 (2011)-Table 1 Groundwater
BH-P01	Uranium	0.2 ug/L	24.6	8.9 ug/L
BH-P02	Silver	0.2 ug/L	0.4	0.3 ug/L
Dup WA	Silver	0.2 ug/L	0.4	0.3 ug/L

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

**APPENDIX C**  
**LIMITATIONS**

## LIMITATIONS

1. The work performed in the preparation of this report and the conclusions presented are subject to the following:
  - (a) The Standard Terms and Conditions which form a part of Wood's Wood's proposal (POESAM2040) and authorized by the Client on June 18, 2020;
  - (b) The Scope of Services;
  - (c) Time and Budgetary limitations as described in our proposal; and,
  - (d) The Limitations stated herein.
2. No other warranties or representations, either expressed or implied, are made as to the professional services provided under the terms of our proposal, or the conclusions presented.
3. The conclusions presented in this report were based, in part, on visual observations of the site and attendant structures. Our conclusions cannot and are not extended to include those portions of the site or structures which were not reasonably available, in Wood's opinion, for direct observation.
4. The environmental conditions at the site were assessed, within the limitations set out above, having due regard for applicable environmental regulations as of the date of the inspection. A review of compliance by past owners or occupants of the site with any applicable local, provincial or federal by-laws, orders-in-council, legislative enactments and regulations was not performed.
5. The site history research included obtaining information from third parties and employees or agents of the owner. No attempt has been made to verify the accuracy of any information provided, unless specifically noted in our report.
6. Where testing was performed, it was carried out in accordance with the terms of our proposal providing for testing. Other substances, or different quantities of substances testing for, may be present on site and may be revealed by different of other testing not provided for in our proposal.
7. Because of the limitations referred to above, different environmental conditions from those stated in our report may exist. Should such different conditions be encountered, Wood must be notified in order that it may determine if modifications to the conclusions in the report are necessary.
8. The utilization of Wood's services during the implementation of any remedial measures will allow Wood to observe compliance with the conclusions and recommendations contained in the report. Wood's involvement will also allow for changes to be made as necessary to suit field conditions as they are encountered.

9. This report is for the sole use of the party to whom it is addressed unless expressly stated otherwise in the report or proposal. Any use which any third party makes of the report, in whole or in part, or any reliance thereon, or decisions made based on any information or conclusions in the report, is the sole responsibility of such third party. Wood accepts no responsibility whatsoever for damages or loss of any nature or kind suffered by any such third party as a result of actions taken or not taken or decisions made in reliance on the report or anything set out therein.
10. This report is not to be given over to any third party for any purpose whatsoever without the written permission of Wood Environment and Infrastructure Solutions.
11. Unless stated otherwise in the Closure Section of this Report, provided that the report is still reliable, and less than 12 months old, Wood may issue a third-party reliance letter to parties CLIENT identifies in writing, upon payment of the then current fee for such letters. All third parties relying on Wood's report, by such reliance agree to be bound by our proposal and Wood's standard reliance letter. Wood's standard reliance letter indicates that in no event shall Wood be liable for any damages, howsoever arising, relating to third-party reliance on Wood's report. No reliance by any party is permitted without such agreement.

## EXECUTIVE SUMMARY

Wood Environment & Infrastructure Solutions, a division of Wood Canada Limited (Wood), was retained by the Regional Municipality of Niagara (RMON; the Client) to conduct a Phase I and II Environmental Site Assessment (ESA) at the property referred to as the Proposed Sewer Alignment & Construction Shafts for the future Wastewater Treatment Plant Site in Niagara Falls, Ontario (the Site). The UTM coordinates (NAD 83) for the approximate centroid of the Site are 652952 E and 4768159 N.

At the time of the reconnaissance, the Site was owned and maintained by the City of Niagara Falls (the City) and the RMON, depending on the section of roadway. The RMON partially owns and maintains (with Ontario Power Generation; OPG) the property at 7606 Oakwood Drive, Niagara Falls.

The Client retained Wood to provide an evaluation of known and possible environmental issues at the Site for the purposes of installing a new sanitary sewer alignment and construction shafts to determine the environmental integrity of the Site.

A Phase I ESA is defined as a systematic qualitative process to assess the environmental condition of a Site based on its historical and current use. It is Wood's understanding that the Phase I and II ESAs are not required for the purposes of filing a Record of Site Condition (RSC) under Ontario Regulation 153/04 (*O. Reg. 153/04*) (as amended by Ontario Regulation 511/09). The Phase I and II ESAs were conducted in conformance with the scope and limitations defined by the Canadian Standards Association (CSA) Phase I Environmental Site Assessment Z768-01 Standard (November 2001, reaffirmed 2016).

Mr. Braedan Huras of Wood conducted a reconnaissance on November 3, 2020 to evaluate possible on-Site issues and assess whether any surrounding land uses may have and/or are currently affecting the environmental condition of the Site. A Site representative did not accompany Wood during the reconnaissance. Ground cover conditions at the time of the Site reconnaissance were clear and dry.

Wood also interviewed the Client (represented by Ms. Jade Anema) via email on November 23, 2020.

The Site is an irregular-shaped property, approximately 5.2 kilometres (km) in length. The Site was primarily flat, except for slopes down towards ditches on either side of the roadway. The surface of the Site consisted mainly of asphalt and gravel, with some grass and vegetation between 7606 Oakwood Drive and Montrose Road. The Queen Elizabeth Way highway (QEW) crosses the Site at Reixinger Road as well as the northern portion of the Site. The surface of the Site was primarily asphalted roadway.

Based on a review of the available information sources, the majority of properties surrounding the Site were agricultural/vacant until prior to 1954, when development of industrial/commercial/ residential properties began in the area of the Site. A railway (industrial land use) has been present since prior to 1934 and crosses Montrose Road just south of the Welland River.

Based on a review of the available information sources and on observations of current and historical surrounding properties (from publicly accessible locations), the following represents potentially contaminating activities (PCAs) which result in areas of potential environmental concern (APECs) on the Site:

- 7606 Oakwood Drive was found to have a diesel fuel aboveground fuel storage tank (AST) and transformer on-Site, and was also listed in a Technical Memorandum completed in February of 2020 by Golder Associates, provided to Wood by the Client, as having registered fuel storage tanks and has been a registered hazardous waste generator for liquid fuels and polychlorinated biphenyls (PCBs);
- The presence of a diesel fuel AST at 8108 Heartland Forest Road;
- The presence of a liquid fuel AST at 7770 Canadian Drive;
- The industrial land use (railway) that crosses Montrose Road; and
- Commercial/industrial properties located on the west side of Montrose Road, most notably 9514 (including a spill of diesel fuel), 9127, and 8485 Montrose Road.

The following table represents PCAs both on and off-Site which result in APECs on the Site:

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-1: Presence of Diesel AST	7606 Oakwood Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	On-Site	pH, EC, SAR, Metals, As, Sb, Se, PHCs, and BTEX	Soil and Ground Water
APEC-2: Presence of Transformer	7606 Oakwood Drive	PCA # 55 – Transformer Manufacturing, Processing and Use	On-Site	PHCs, BTEX, and PCBs	Soil and Ground Water
APEC-3: Spill of Diesel Fuel	Montrose Road between Reixinger Road and the Welland River	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and BTEX	Ground Water

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-4: Industrial Land Uses, Spills, PCB Storage, ASTs	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks PCA #33 – Metal Treatment, Coating, Plating and Finishing PCA #34 – Metal Fabrication PCA #39 – Paints Manufacturing, Processing and Bulk Storage PCA #57 – Vehicles and Associated Parts Manufacturing	Off-Site	EC, SAR, pH, Metals, As, Sb, Se, PHCs, VOCs, PCBs, and PAHs	Ground Water
APEC-5: Railway	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #46 – Rail Yards, Tracks and Spurs	On-Site	Metals including As, Sb, Se, PHCs, VOCs, and PAHs	Soil
APEC-6: Chemical and Pharmaceutical Research Company at 8485 Montrose Road	Montrose Road Between Blackburn Parkway to 100 m South of Blackburn Parkway	PCA #8 – Chemical Manufacturing, Processing and Bulk Storage PCA #42 – Pharmaceutical Manufacturing and Processing	Off-Site	pH, EC, SAR, Metals, As, Sb, Se, and VOCs	Ground Water

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-7: Diesel Fuel AST Located at 8108 Heartland Forest Road	Brown Road Between Heartland Forest Road and 50 m East of Heartland Forest Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and VOCs	Ground Water
APEC-8: Liquid Fuel AST Located at 7770 Canadian Drive	Montrose Road Between Canadian Drive and 50 m South of Canadian Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and VOCs	Ground Water

\*Potentially Contaminating Activity (PCA) described specifically for the Site with reference to the applicable item number in the Table of Potentially Contaminating Activities provided in Schedule D of *O. Reg. 153/04* as amended, where applicable.

PHCs – Petroleum Hydrocarbons

BTEX – Benzene, Toluene, Ethylbenzene, Xylenes

PCBs – Polychlorinated Biphenyls

PAHs – Polycyclic Aromatic Hydrocarbons

VOCs – Volatile Organic Compounds

EC – Electrical Conductivity

SAR – Sodium Adsorption Ratio

As – Arsenic

Sb – Antimony

Se - Selenium

Based on the Phase I ESA completed by Wood, there is evidence of actual and potential contamination associated with the Site from on-Site and off-Site land uses. An intrusive investigation (i.e., Phase II ESA) is recommended to address the APECs.

## 1.0 INTRODUCTION

### 1.1 Background

Wood Environment & Infrastructure Solutions, a division of Wood Canada Limited (Wood), was retained by the Regional Municipality of Niagara (RMON; the Client) to conduct a Phase I and II Environmental Site Assessment (ESA) at the property referred to as the future Sewer Alignment & Construction Shafts for the future Wastewater Treatment Plant Site in Niagara Falls, Ontario (the Site). A key plan showing the location of the Site is provided on **Figure 1**. For the purpose of this Phase I ESA report, the Site is divided into sections as follows:

- Reixinger Road, from 6811 Reixinger Road to Montrose Road (Section A);
- Montrose Road, from Reixinger Road to south of Canadian Drive (Section B);
- Brown Road, from Montrose Road to Heartland Forest Road (Section C); and
- A section of land extending in a straight line west from 7606 Oakwood Drive (South Side High Lift Sewage Pumping Station; SSL SPS) to south of Canadian Drive (Section D; Figure 1).

The UTM coordinates (NAD 83) for the approximate centroid of the Site are 652952 E and 4768159 N.

At the time of the reconnaissance, the Site was owned and maintained by the City of Niagara Falls (the City) and the RMON, depending on the section of roadway. The RMON partially owns and maintains (with Ontario Power Generation; OPG) the property at 7606 Oakwood Drive, Niagara Falls. **Figure 2** illustrates the lot configuration of the Site.

The Client retained Wood to provide an evaluation of known and possible environmental issues at the Site for the purposes of installing a new sanitary sewer alignment and construction shafts to determine the environmental integrity of the Site.

A Phase I ESA is defined as a systematic qualitative process to assess the environmental condition of a Site based on its historical and current use. It is Wood's understanding that the Phase I ESA is not required for the purposes of filing a Record of Site Condition (RSC) under Ontario Regulation 153/04 (*O. Reg. 153/04*) (as amended by Ontario Regulation 511/09). The Phase I ESA was conducted in conformance with the scope and limitations

defined by the Canadian Standards Association (CSA) Phase I Environmental Site Assessment Z768-01 Standard (November 2001, reaffirmed 2016).

## 1.2 Scope of Work

The Phase I ESA was carried out in accordance with Wood's proposal (POESAM2040) and authorized by the Client on June 18, 2020. The scope of work for the Phase I ESA consisted of the following tasks:

- Reviewing the historical occupancy of the Site, using available archived and relevant (in Wood's opinion) municipal and business directories, fire insurance plans (FIPs), aerial photographs and previous environmental reports;
- Reviewing the current use of the Site and any land use practices that may have impacted its environmental condition;
- Reviewing the current use of the surrounding properties and any land use practices that may have impacted the environmental condition of the Site;
- Conducting a "walk-through" visual assessment (i.e., Site reconnaissance) of the Site and building facilities to identify the presence of actual and/or potential environmental contaminants or concerns of significance;
- Conducting interviews with designated Site representatives as a resource for current and historical Site information, as well as to provide Wood staff with unrestricted access to all areas of the Site and Site buildings;
- Reviewing an EcoLog Environmental Risk Information Services Ltd. (ERIS) report for the Site. ERIS is a national service that provides site specific environmental and property-use information. ERIS reports contain detailed government and private sector records concerning possible environmental liabilities associated with properties and their surrounding neighborhoods;
- Contacting municipal and provincial agencies to determine the existence of records of environmental regulatory non-compliance, if any, and reviewing such records where available. It should be noted that responses from these agencies might not be received prior to preparation of the report. The Client would be notified when a response is received and any additional costs to obtain these records; and

- Preparing a report of our findings.

A search of land title and assessment rolls was not conducted as a part of this investigation. A search of land ownership is unlikely to contribute any useful information regarding the environmental condition at the Site as the ownership of the property since the original development is documented in other historical records.

Mr. Braedan Huras of Wood conducted a reconnaissance on November 3, 2020 to evaluate possible on-Site issues and assess whether any surrounding land uses may have and/or are currently affecting the environmental condition of the Site. A Site representative did not accompany Wood during the reconnaissance. Ground cover conditions at the time of the Site reconnaissance were clear and dry.

Wood also interviewed the Client (represented by Ms. Jade Anema) via email on November 23, 2020. Other contacts were made as required to evaluate the existing/historical Site operations including the following:

Name	Agency or Company	Position
Mr. Noel Kent	Ministry of the Environment, Conservation and Parks (MECP) – Freedom of Information (FOI) Office	MECP FOI Manager
Ms. Sherees Thompson	Technical Standards and Safety Association (TSSA)	Public Information Agent
Mr. Alex Herlovitch	City of Niagara Falls (City)	Deputy Director of Planning & Development

These individuals and agencies were contacted as they may have information related to the environmental conditions of the Site. Records of the interviews and/or correspondence are provided in **Appendix A**. Should information become available at any time in the future that materially affects the conclusions of this report, this information will be forwarded to the Client.

Wood did not conduct any intrusive investigations in completing the scope of work. No sampling and/or analyses of soil, sediment, water, liquid, gas or air was performed at the Site. This Phase I ESA report is not to be construed as a regulatory compliance audit or review. Although Section 6.0 of this report discusses designated substances and hazardous materials normally reviewed as part of a Phase I ESA including asbestos containing materials (ACMs), lead, mercury, ozone-depleting substances (ODS), polychlorinated biphenyls (PCBs) and mould, the review was performed at a cursory level

and for the Site as a whole. No sampling or analytical testing for designated substances and/or hazardous materials was performed. This report should thus not be construed as a designated substance or hazardous materials survey or assessment.

## 2.0 SITE DESCRIPTION

### 2.1 Site Location

For the purpose of this Phase I ESA report, the Site is divided into sections as follows:

- Reixinger Road, from 6811 Reixinger Road to Montrose Road (Section A);
- Montrose Road, from Reixinger Road to south of Canadian Drive (Section B);
- Brown Road, from Montrose Road to Heartland Forest Road (Section C); and
- A section of land extending in a straight line west from 7606 Oakwood Drive (South Side High Lift Sewage Pumping Station; SSHL SPS) to south of Canadian Drive (Section D; **Figure 1**).

The Site itself is considered community land use, however each section is in a slightly different land use setting. Section A lies in a typical agricultural/vacant setting in an area of primarily agricultural land use, with some residential and commercial land use. Section B lies in a primarily commercial/industrial setting with some residential land use. Section C lies in a primarily residential setting with some commercial/industrial land use (south of this section of the Site). Finally, Section D lies in a primarily commercial/community setting, including passing through the Queen Elizabeth Way Highway (QEW) and a vacant property.

### 2.2 Site Occupancy

The Site was primarily community land use at the time of the Site visit, occupied by several sections as described above in Section 2.1.

### 2.3 Site Features

The Site is an irregular-shaped property, approximately 5.2 kilometres (km) in length. Selected photographs of the Site and surrounding land use are presented in **Appendix B**. The Site was primarily flat, except for slopes down towards ditches on either side of the roadway. The surface of the Site consisted mainly of asphalt and gravel, with some grass and vegetation in Sections A and D.

## 2.4 Site Services

At the time of the Site reconnaissance, there were residential, commercial, and industrial buildings present on either side of the roadway, with various services (storm/sanitary sewers, water, natural gas, hydro, etc.) running either within the roadway ROW, or on either side of the roadway ROW. Stormwater generally flows overland to ditches on either side of the roadway, except for the northern portion of Section C, where catch basins were also present at the Site.

There were aboveground hydro lines-oriented east to west along the south end of the eastern portion Section A, and along the north end of the eastern portion Section A. Along Section B, the aboveground hydro lines were oriented north to south on the east side of the roadway. Additionally, the aboveground hydro lines were oriented east to west along the south side of the roadway. Finally, aboveground hydro lines-oriented north to south service the property at 7606 Oakwood Drive.

## 2.5 Physical Setting

The Site lies at an elevation approximately 174 to 180 metres above sea level (mASL) (**Google Earth**). The topography across the Site is generally flat, with some areas of varying elevation where the Site crosses other roadways and the QEW.

According to the **Quaternary Geology of Ontario, Southern Sheet, Map 2556**, published by the **Ministry of Northern Development and Mines (MNDM)**, the geology near the Site is interpreted to consist of a few different forms of quaternary geology. The geology near the Site consists of:

- Fine-textured glacio-lacustrine deposits including silt and clay with minor sand and gravel,
- Man-made deposits including fill, sewage lagoon, landfill and urban development, and
- Modern alluvial deposits including clay, silt, sand, and gravel, and may contain organic materials.

**Bedrock Geology of Ontario, Southern Sheet, Map 2544**, published by the **MNDM**, describes bedrock in the area to be:

- Dolostone, sucrosic, fossiliferous, locally biohermal, locally bituminous from the Guelph Formation (for the approximate southern half of the Site), and
- Argillaceous dolostone, with shale and evaporites (gypsum, salt at depth) from the Salina Formation.

The local ground water flow direction, based on topographic features and knowledge gained from other sites in the area, is expected to be varying across the Site, but generally towards the Welland River. Water typically drains off-Site (off of the roadways) into ditches located on either side of the majority of the Site. Locally, however, the shallow ground water flow may be influenced by underground utility trenches, conduits, and structures, variations in soil type, and minor fluctuations in topography.

### 3.0 ADJACENT LAND USES

Wood reviewed the current land uses of neighbouring properties from publicly accessible locations to assess possible environmental impacts to the Site that may arise from off-Site operations. As noted in Section 2.0, Section A lies in a typical agricultural/vacant setting in an area of primarily agricultural land use, with some residential and commercial land use. Section B lies in a primarily commercial/industrial setting with some residential land use. Section C lies in a primarily residential setting with some commercial/industrial land use (south of this section of the Site). Finally, Section D lies in a primarily commercial/community setting, including passing through the QEW and a vacant property..

Properties surrounding the Site are summarized as follows:

#### North of the Site

Section A: Agricultural, residential, commercial, community, and light industrial land uses (e.g., Lyons Creek Metal Finishing at 7001 Reixinger Road).

Section B: Commercial land use (the Niagara Square shopping centre).

Section C: Residential land use.

Section D: Vacant land use, followed by community and commercial land use (Oakwood Drive, followed by a shopping plaza).

#### East of the Site

Section A: Agricultural and residential land uses.

Sections B & C: Primarily community land use (the QEW), followed by commercial and industrial land uses (e.g., automotive dealerships, a campground, auto repair garages, and Modern Mosaic Ltd. [a precast concrete manufacturer]).

Section D: The SSL SPS at 7606 Oakwood Drive, followed by the Queenston-Chippawa Power Canal (the hydro canal).

#### South of the Site

Section A: Primarily agricultural/vacant land use with some residential and commercial land use.

Section B: Community (continuation of Montrose Road to the south) and agricultural/vacant land uses.

Section C: Vacant/forested and commercial/light industrial land uses (sewage pumping station at Heartland Forest Road and Brown Road, followed by the WeGo transit facility).

Section D: Primarily commercial land use (Kia automotive dealership, followed by automotive garages and other commercial businesses).

#### West of the Site

Section A: Agricultural, community (Montrose Road), and commercial (golf course) land uses.

Section B: Commercial (Concentrix, Sam's Montrose Hotel, Northernchem Inc, etc.), industrial (E.S. Fox Ltd.), residential, and vacant/forested land use.

Section C: Community (western portion of Brown Road) and residential land uses.

Section D: Primarily commercial and industrial land use (Roman Cheese Products, the Niagara Square shopping centre, etc.)

#### Summary of Findings

Based on observations of these current surrounding properties (from publicly accessible locations), the commercial/light industrial properties surrounding Sections A, B, C, and D represent potentially contaminating activities (PCAs) which result in areas of potential environmental concern (APECs) on the Site. However, the commercial/industrial properties east of Section B are generally not considered to result in APECs on the Site, due to separation distances, inferred ground water flow direction, and the separation of those properties from the Site due to the QEW.

## 4.0 RECORDS REVIEW

The historical occupancy of the Site and the surrounding properties were reviewed using reasonably available public information consisting of, but not limited to, archived aerial photographs, city directories, FIPs and previous environmental reports. The historical information reviewed was obtained from the following sources:

- Aerial photographs, available at Special Collections, Brock University, in St. Catharines, Ontario, (Brock Special Collections) for the years 1955, 1965, 1978, 1983 and 1994;
- Aerial photographs, available online at <http://navigator.yourniagara.ca>, for the years 1934, 2000, 2006, 2010, and 2018;
- FIPs, available in-house for 1965; and
- Previous environmental reports.

Due to restrictions associated with the COVID-19 pandemic, city directories were not available from the Brock Special Collections library, and limited city directories were available from ERIS.

### 4.1 Aerial Photographs

A review of selected aerial photographs was conducted to determine the general development history of the development of the Site and surrounding properties. In some cases, available aerial photography may be at a scale that precludes a detailed interpretation of the Site and surrounding area. The following significant information was inferred from the aerial photographs reviewed concerning the Site and its surrounding properties:

Date	Site	Surrounding Properties
1934	Sections A and B of the Site appeared to be in community land use (roadway – Reixinger Road). The roadway along the northern portion of Section B does not yet appear to be constructed. Sections C and D appeared to be in agricultural land use.	Properties surrounding the Site were primarily in agricultural land use, with industrial land use (a railway) crossing the southern portion of Section B, just south of the Welland River.
1954	No significant changes noted.	Inferred residential/commercial/light industrial dwellings were present north of Section A along Reixinger Road. East of Section B was the QEW highway, followed by some inferred industrial land uses along Oakwood Drive.
1965 (northern half of the Site) 1968 (southern half of the Site)	No significant changes noted.	Further commercial/industrial/residential development has occurred east of the QEW, east of Section B. An inferred industrial land use is now present west of Section B, adjacent to the railway.
1978	The SSHL SPS is now present at 7606 Oakwood Drive. The northern portion of Section B and Section C are now constructed and in community land use as roadways.	Additional commercial/residential land use development has occurred on surroundings properties along either side of the entire Site. This includes the Niagara Square shopping mall located northwest of Sections B and D.
1983	No significant changes noted.	Inferred continued residential/commercial/industrial land use development has occurred on the east and west sides of Sections A and B.
1994	No significant changes noted.	No significant changes noted.

Date	Site	Surrounding Properties
2000	No significant changes noted.	Inferred continued residential/commercial/industrial land use development has occurred on the east and west sides of Sections A and B.
2010	No significant changes noted.	No significant changes noted.
2018	No significant changes noted.	Residential land use development has occurred north of Section C.

Aerial photographs are presented in **Appendix C**.

## 4.2 City Directories

### Site

Due to the nature of the Site (i.e., a roadway), it is not listed in the city directories.

### Surrounding Properties

The following properties surrounding the Site were reviewed and may present the Site with potential environmental concerns.

<b>7001 Reixinger Road (North side of Reixinger Road)</b>		
1961	2007/2008	Street Not Listed
2007/2008	Present	Lyons Creek Metal Finishing
<b>7089 Reixinger Road (North Side of 7047 Reixinger Road)</b>		
1961	2007/2008	Street Not Listed
2007/2008	2012	Residential
2012	Present	Patterned Concrete Niagara
<b>9127 Montrose Road (West side of Montrose Road)</b>		
1961	1991	Address Not Listed
1991	1996/1997	Ford Motor Company of Canada Ltd.
1996/1997	2007/2008	Address Not Listed
2007/2008	2012	Kraft Canada Unico Facility Services ES Fox Ltd.

		Gnr Property Maintenance Chelwood
2012	Present	CanGro Foods Inc Chelwood EX Fox Ltd. GNR Property Maintenance Sf Partners Inc.
<b>9514 Montrose Road (East side of Montrose Road)</b>		
1961	2007/2008	Street Not Listed
2007/2008	Present	Crown Trucking Services Peter's Delivery Service (2012 to Present only)

#### 4.3 Fire Insurance Plans

The following significant information was inferred from the FIPs reviewed concerning the Site and its surrounding properties.

Year	Observations
1965	The area of the Site and surrounding properties were not included in the FIP.

#### 4.4 Company Records

No company records were provided to Wood during the completion of the Phase I ESA.

#### 4.5 Previous Environmental Site Assessments

A Technical Memorandum completed in February of 2020 by Golder Associates (the February 2020 Golder Report) was provided to Wood by the Client. The purpose of the February 2020 Golder Report was to review and summarize the ERIS reports for some properties along the Site alignment. A summary of the notable findings for the properties surrounding the Site are as below (paraphrased):

- 7606 Oakwood Drive:
  - Spills were reported at this property in 2009, 2014, and 2019. Equipment failure resulted in an unknown amount of chlorinated sewage being

- discharged to the natural environment. Environmental impact was confirmed;
- This property had registered commercial fuel storage tanks;
  - This property was listed intermittently as a hazardous waste generator from 2002 to 2016 for light fuels and PCBs; and
  - This property had a Certificate of Approval (CofA) for industrial air and municipal and private sewage in 2000.
- 7868 Oakwood Drive:
    - This property had a CofA for industrial air in 1993;
    - Businesses at this property was listed as a hazardous waste generator of petroleum distillates from 1992 to 1998, and was also listed as a hazardous waste generator of waste oil skimmings and sludges from 2005 to 2011; and
    - One business (234612 Ontario Inc.) at this property was listed a pesticide operator.
  - 7888 Oakwood Drive:
    - This property was listed as a hazardous waste generator of: aliphatic solvents and residues, waste crankcase oils and lubricants, light fuels, waste oil and sludges (petroleum based), as of December 2018; and,
    - One water well was identified at this property.
  - 8066 Oakwood Drive was listed intermittently as a hazardous waste generator from 1999 to 2019 for the following wastes: waste oils and lubricants, waste crankcase oils and lubricants.
  - 8108 Heartland Forest Road had a CofA for industrial air, municipal and private sewage works in 2007.
  - 8208 Heartland Forest Road:

- This property was approved under the environmental registry for industrial air in 2016;
- A spill was reported in 2016. A discharged of 200 litres (L) of diesel fuel due to equipment failure; and
- This property was listed intermittently as a hazardous waste generator from 2015 to 2019 for petroleum distillates, aliphatic solvents, waste oils and lubricants, oil skimming and sludges.
- 8230 Oakwood Drive:
  - This property had a CofA for industrial air in 2000;
  - Businesses at this property were listed intermittently as hazardous waste generators from 1992 to 2001, and 2003 to 2014 for waste oils and lubricants and petroleum distillates; and
  - Records of two expired gas and diesel fuel storage tanks was registered at this property.
- 8676 Oakwood Drive was listed in 1995 as a retail fuel outlet (RFO) of propane gas.
- 8620 Oakwood Drive had a CofA for industrial air and sewage in 2001 and 2004.
- 7695 Blackburn Parkway was listed intermittently as a hazardous waste generator since 2006 for aliphatic solvents, petroleum distillates and acid waste-other metals.
- 8550 Oakwood Drive was listed intermittently as a hazardous waste generator since 2000 for waste oils and lubricants and was listed as a limited vendor of pesticides.
- 8485 Montrose Road was listed intermittently as a hazardous waste generator from 2005 to 2015 for waste oils and lubricants and paint/pigment/coating residues.
- 8675 Montrose Road reported a spill to land by the Client of approximately 500 L of grey water as a result of equipment failure.
- 6533 Reixinger Road has a CofA for air in 2004.

- 7171 Reixinger Road was listed as a hazardous waste generator from 2013 to 2018 for paint/pigment/coating residues.
- 7226 Reixinger Road was listed intermittently as a hazardous waste generator from 2015 to 2018 and as of October 2019 for wastes oils and lubricants, waste crankcase oils and lubricants.

## 4.6 Summary of Historical Records Review

### Site History

From prior to 1934 until present, the Site was occupied by commercial land use (i.e., roadways), except for the northern portion of Section B, and Sections C and D. These sections were not yet constructed as roadways until approximately 1978 and were historically in agricultural land use. 7606 Oakwood Drive has been in industrial land use since approximately 1978 when the SSSL SPS was constructed.

### Surrounding Land Use History

Based on a review of the available information sources, the majority of properties surrounding the Site were agricultural/vacant until prior to 1954, when development of industrial/commercial/ residential properties began in the area of the Site. A railway (industrial land use) has been present since prior to 1934 and crosses Section B of the Site just south of the Welland River.

### Summary

Based on the historical review completed the following actual and potential environmental issues were identified concerning the Site and surrounding historical land use activities:

- 7606 Oakwood Drive (portion of Section D) was listed in the February 2020 Golder Report as having registered fuel storage tanks on-Site and has been a registered hazardous waste generator for liquid fuels and PCBs;
- The industrial land use (railway) that crosses Section B of the Site; and
- Commercial/industrial properties located on the west side of Montrose Road (Section B), most notably 8485 Montrose Road.

The presence of commercial/light industrial businesses and a historic wrecking yard north of Section A (on the north side of Reixinger Road) for metal and concrete finishing would

also present a potential environmental issue at the Site. However, during the previous Phase II ESA completed by Wood for the Client for the properties at 6811 and 7047 Reixinger Road (the Wood WWTP Phase II ESA), no significant environmental issues were identified in this area.

Additionally, the remaining surrounding properties were not inferred to result in APECs on the Site according to the records review, due to separation distances, inferred downgradient/transgradient directions, and the nature of the operations.

## 5.0 REGULATORY AGENCY FILES AND DATABASE REVIEW

The following databases and documents were reviewed to further assess the environmental condition of the Site:

### 5.1 Local Municipal Agency

Wood contacted the City to inquire if they had any records of environmental non-compliance concerning the Site. In addition, Wood also contacted the RMON (i.e., the Client) to ensure that any records of environmental significance regarding the Site had been provided to Wood. This was included as part of the interview portion of the Phase I ESA.

At the time of preparation of this report, a response had not yet been received from the City. If the records obtained alter the conclusions of this report, the Client will be notified immediately.

Copies of the City and RMON correspondence are provided in **Appendix A**.

### 5.2 Technical Standards and Safety Authority

Fuel storage at industrial facilities in Ontario is regulated by the *Technical Standards and Safety Act 2000 (TSS Act)*. The *TSS Act* has consolidated the seven acts that the TSSA previously administered, including the *Gasoline Handling Act* and the *Energy Act*. Under the *TSS Act*, the *Liquid Fuel Handling Regulation*, *Liquid Fuel Handling Code* and the *Environmental Management Protocol* (also known as GA1/99) have replaced the *Gasoline Handling Act*, *The Gasoline Handling Code* and *GH13* (1993 Environmental Cleanup Guideline). The *TSS Act* applies to all storage tank systems utilized for the storage and handling of gasoline, diesel and fuel oil. According to discussions with a representative of the TSSA - Fuels Safety Division, underground storage tanks (USTs) and aboveground storage tanks (ASTs) installed under the *Liquid Fuel Handling Regulation*, *Liquid Fuel Handling Code* require registration with the TSSA. Fuel oil tanks utilized in residential buildings will also require registration with the TSSA.

The TSSA was contacted by email and requested to supply any available information concerning the presence of petroleum storage tanks, fuel spill records, accidents, or fuel-related incidents, which may be registered on the subject, or surrounding properties. Wood was contacted by Ms. Sherees Thompson of the TSSA on December 8, 2020 via email and indicated that one record of a “Fuel Oil Tank” was found at 7606 Oakwood

Drive. 7606 Oakwood Drive is known as the SSHL SPS, which is included as part of the Site (Section D).

A copy of the TSSA response is provided in **Appendix A**.

### 5.3 Ministry of the Environment, Conservation and Parks

Wood completed a Freedom of Information (FOI) search request with the Ministry of the Environment, Conservation and Parks (MECP), to inquire if records of environmental regulatory non-compliance, if any, concerning the Site were available.

At the time of preparation of this report, a response had not yet been received from the MECP. Should the MECP notify Wood that subsequent information is on file and obtainable, Wood will notify the Client of this information and the additional cost (if any) to obtain these records. If the records obtained alter the conclusions of this report, the Client will be notified immediately. A copy of the MECP response is provided in **Appendix A**. Wood followed up with the MECP on January 12, 2022. The MECP indicated that there are delays in the completion of FOI requests due to issues associated with the COVID-19 pandemic.

In addition, Wood accessed the MECP's *Access Environment* website on January 25, 2021, to search for information on Environmental Compliance Approvals (ECAs) (formerly known as CofAs, Renewable Energy Approvals (REAs) and registrations on the Environmental Activity and Sector Registry (EASR), which may be listed to the Site. Several records of ECAs for air and sewage works were identified within 250 m of the Site and are not inferred to present an environmental concern to the Site. Additionally, 1 EASR was found for the property at 7868 Oakwood Drive for an automotive refinishing facility (approval # R-001-3110412945), although due to separation distance and inferred transgradient direction, this is not expecting to result in an APEC on the Site.

#### 5.3.1 Waste Disposal Site Inventory

Wood reviewed the document entitled "*Waste Disposal Site Inventory*", prepared by the Waste Management Branch of the MOE (dated June 1991). No active or closed waste disposal sites were listed as being present within 1 km of the Site.

### 5.3.2 Inventory of Coal Gasification Plant Waste Sites in Ontario

Wood reviewed the document entitled “*Inventory of Coal Gasification Plant Waste Sites in Ontario*”, prepared for the MOE (dated April 1987). No coal tar sites were listed on the Site or in the surrounding area.

### 5.3.3 Registered PCB Waste Storage Sites as of October 2004

Wood reviewed the MOE computer database on Registered PCB Waste Storage Sites as of October 2004 (database last updated in October 2004). The Site and immediately surrounding properties were not listed as a PCB waste storage site prior to October 2004.

### 5.3.4 Registered Waste Generators for the year 2015

Wood reviewed the MECP computer database on Registered Waste Generators for the year 2015 (the most current). The Site was not listed as a registered waste generator. In addition, Wood accessed the MECP’s *Hazardous Waste Information Network* (HWIN) website on January 25, 2021, to search for information on HWIN registered waste generators, which may be listed to the Site and surrounding properties. Information gained from this search is listed below. Several surrounding properties were listed as waste generators, most notably:

- 9127 Montrose Road (E.S. FOX) – adjacent west of Section B, south of the Welland River, was listed as a waste generator (ON0214904). This address was listed as a waste generator for several types of wastes, including but not limited to: acid waste – heavy metals, alkaline wastes, paint/pigment/coating residues, inorganic laboratory chemicals, light fuels, latex wastes, and waste oils and lubricants;
- 9514 Montrose Road (Crown Trucking Services, Crown Transportation Group Limited) - adjacent east of Section B, south of the Welland River, was listed as a waste generator (ON1835800, ON4337057). No waste registration details were available from HWIN;
- 8485 Montrose Road (Alo North American, Inc.) - adjacent west of Section B, south of the Welland River, was listed as a waste generator (ON5410231). Details of the waste registration are described in Sections 4.5 and 5.4;

- 7226 Reixinger Road (Nexterra Substructures Incorporated) - adjacent south of Section A, east of the QEW (ON8726314). Details of the waste registration are described in Sections 4.5 and 5.4; and
- 7171 Reixinger Road (Sealer Works Inc.) – adjacent north of Section A, east of the QEW (ON5737072). Details of the waste registration are described in Sections 4.5 and 5.4.

NOTE: Not all companies are listed in the MECP's 2015 Database.

### 5.3.5 Registered Waste Receivers for the year 2015

Wood reviewed the MECP computer database on Registered Waste Receivers for the year 2015 (the most current). The Site and surrounding properties were not listed as industrial waste receivers.

NOTE: Not all companies are listed in the MECP's 2015 Database.

### 5.3.6 Brownfields Environmental Site Registry

The MECP Brownfields Environmental Site Registry was accessed on February 5, 2021 to determine if any RSCs have been filed under Part XV.1 under the *Environmental Protection Act* (EPA) for the Site or any of the surrounding properties. A search of the registry indicated that there are no RSCs filed for the Site or any properties in the immediate vicinity of the Site.

## 5.4 EcoLog ERIS Report

An EcoLog ERIS report for the Site and surrounding study area was requested. ERIS is a national service that provides site specific environmental and property-use information. An ERIS report contains detailed government and private sector records concerning possible environmental liabilities associated with a property and the surrounding neighbourhoods.

For the Site, the ERIS project number is 20311800192. The ERIS report may be referenced in **Appendix D**. The following significant findings (in Wood's opinion) of the ERIS search are summarized as follows, with reference to each section of the Site:

### Reixinger Road

- The presence of several commercial/light industrial operations along the eastern portion of Reixinger Road (east of the QEW), including the historic presence of two auto wrecking yards, represents PCAs for this portion of the Site. However, as described in Section 4.6, these PCAs are not inferred to represent an actual source of contamination at the Site based on the work completed during the Wood WWTP Phase II ESA.

### Montrose Road

- Several properties along Montrose Road have been or currently are in industrial and/or commercial land use. The following important information (in Wood's opinion) in regard to the environmental condition of the Site has been found to date:
  - 9515 Montrose Road
    - Previously operated by commercial printing business, such as Day-Timers of Canada Ltd. and Sandt Printing Company Ltd. Listed as waste generators for various wastes including waste oils and lubricants, paint/coating/pigment residues, aliphatic solvents, etc. This land use results in a PCA, however, due to the nature of the operations, it does not result in an APEC on the Site.
  - 9514 Montrose Road
    - A spill of approximately 136 L of diesel fuel occurred at this address on January 27, 1995, due to damage from moving equipment. The fuel was spilled onto a concrete pad and was noted as being "cleaned"; however environmental soil contamination was listed as "possible". The industrial/commercial operations at this facility, and the assumed former presence of a fuel storage tank (including the spill) represent PCAs. These PCAs are inferred to have resulted in an APEC on the Site.
  - 9127 Montrose Road
    - This property is currently operated as inferred industrial land use, by ES Fox (formerly the Ford Motor Company of Canada). Multiple records were found in the ERIS report in regards to this property, most notably: two spills of oily

wash water and oil to the Welland River, two listings in the National PCB Inventory for 1990 and 1996 of holding PCB waste for disposal, a listing in the Inventory of PCB Storage Sites for holding several drums of material containing high levels of PCBs, waste generator listings for petroleum/oil/fuel-related wastes, and two ASTs listed as of 2007 containing 25,000 L of gasoline and 15,000 L of diesel fuel. The long history of industrial activities at this property and the listed activities represent PCAs and result in an APEC on the Site.

- 8485 Montrose Road
  - This property is currently occupied by Northernchem Inc., a chemical and pharmaceutical research and development company. It was formerly occupied by Alo North America Inc., which was a distributor of industrial machinery, equipment and supplies. They were also a waste generator of waste oils and lubricants (various years between 2005 to 2015) as well as paint/pigment/coating residues (in 2015). The nature of these light industrial operations represents a PCA, which results in an APEC on the Site.
- 7770 Canadian Drive
  - This property was occupied by Roman Cheese, a manufacturer and distributor of various dairy products. A spill of liquid nitrogen occurred in 1991, however environmental impact was not anticipated. However, during the Site reconnaissance, an AST was identified along the north building edge. Due to the inferred upgradient ground water flow direction of this property, the activities at this property represent a PCA that results in an APEC on the Site.
- A spill of a diesel fuel and water mixture occurred on the QEW between McLeod Road and Lyons Creek Parkway on May 1, 2006. While this spill represents a PCA and results in APEC on the Site, it is not possible to determine exactly where along this stretch of the QEW this spill occurred. Therefore, a precise APEC area cannot be drawn.
- Other light industrial/commercial activities along Montrose Road that represent PCAs but are not inferred to have resulted in APECs, but are not limited to: SWS Start Warning Systems Inc. (7695 Blackburn Parkway), and the operations along Oakwood Drive from approximately 7888 Oakwood Drive to 8676 Oakwood Drive.

These properties are not believed to have resulted in APECs on the Site, due to separation distances, the nature of several of the operations, and their inferred downgradient direction compared to the Site.

#### Brown Road

- The operations at 8208 (City of Niagara Falls Transit building) are not inferred to result in an APEC on the Site, due to separation distance and the inferred downgradient direction from the Site.

#### 7606 Oakwood Drive

- The South Side High Lift Pump Station located at 7606 Oakwood Drive contains a gasoline AST and a transformer. As this property is considered part of the Site, these activities represent a PCA which results in an APEC in this portion of the Site.
- The Kia Dealership and auto garage located at 7838, 7818, and 7848 Oakwood Drive also represent PCAs, however they do not result in APECs on the Site, due to their separation distance from the Site and their inferred transgradient direction from the Site.

### **5.5 Summary of Regulatory Database Review**

Based on these findings, there are additional PCAs that results in APECs on the Site associated with both on-Site and off-Site issues. Most notably are the following:

- The presence of a diesel fuel AST and transformer located at 7606 Oakwood Drive (Section D); and
- The presence of several commercial/industrial properties, including evidence of waste generation, spills, and long-term industrial operations.

Other commercial/industrial land uses located along Montrose Road (Section B), Reixinger Road (Section A), and Oakwood Drive (Sections B and D) are not inferred to result in APECs on the Site due to a combination of separation distances, inferred downgradient/transgradient directions, and the nature of the operations.

## 6.0 SITE VISIT AND INTERVIEWS

The findings documented in this section are based on a combination of observations made by Wood personnel at the time of the Site visit, as well as information provided by the Site representatives and other individuals contacted as part of the interview process.

### 6.1 General Site Conditions and Housekeeping

In general, the Site appeared to be well maintained. Wood did not observe amounts of debris, staining, outdoor chemical storage or uncontrolled waste storage on-Site at the time of the reconnaissance except some litter than had likely been disposed of by individuals using the roadways.

### 6.2 Air Emissions

Wood did not observe the presence of air emission sources at the time of the reconnaissance that could possibly affect the environmental condition of the Site.

### 6.3 Chemical Storage and Handling

One fuel tank was noted to be on-Site at 7606 Oakwood Drive. According to the Client, the tank contains diesel to fuel the back-up generator. A diesel tank was also noted at the pump station at 8108 Heartland Forest for the same purpose. Finally, another fuel tank was noted to be adjacent to the north side of the building at 7770 Canadian Drive. Wood is not aware of any chemical spills having occurred at the Site and no evidence of chemical spills, accidental releases or significant staining was observed that would indicate the occurrence of major environmental events (such as spills) that may have significantly affected the quality of the subsurface. As stated in Section 5.4, several spills of various fluids had occurred at properties surrounding the Site.

### 6.4 Designated Substances

Individual designated substance regulations have been developed for eleven chemical contaminants and are enforced by the Ministry of Labour (MOL) under the Occupational Health and Safety Act (OHSA). Special regulations were made to prohibit, regulate, restrict, limit, or control worker exposure to designated substances due to their toxic nature. The designated substances identified in OHSA include:

Asbestos  
Arsenic

Vinyl Chloride  
Benzene

---

Lead	Coke Oven Emissions
Ethylene Oxide	Acrylonitrile
Mercury	Isocyanates
Silica	

Given the nature of the Site, Wood has focussed on the following designated substances.

#### 6.4.1 Asbestos

Asbestos is a generic term that refers to a group of naturally occurring fibrous mineral silicates. The ability of asbestos to withstand high temperatures as well as its tensile strength, spinnability, resistance to chemicals and other properties have resulted in hundreds of applications. Friable asbestos refers to materials, which can be readily crumbled using hand pressure, separating asbestos fibres from the binding materials with which they are associated. Non-friable material refers to asbestos, which is associated with a binding agent (such as tar or cement), that prevents the ready release of airborne fibres. Friable asbestos is commonly found in boiler and pipe insulation. Non-friable or bound asbestos is typically found in roofing tars, floor and drywall compound, plaster and precast asbestos cement products commonly referred to as “transite”.

As there were no structures on the Site within the scope of this assessment, ACMs are not a concern at the Site.

#### 6.4.2 Lead

Lead is a heavy metal, which is typically found in the following three forms:

- Metallic lead used to make water distribution pipes, electrical batteries, lead solder, and electric cable sheathes;
- Inorganic compounds often occurring as components of products, such as insecticides, pigments, paints, and glass; and
- Organic lead compounds, the most commonly known of which are tetramethyl lead and tetraethyl lead, used as antiknock additives to gasoline.

The presence of lead containing paints (LCPs) in buildings represents the most significant hazard of all the above noted lead containing products where persons, notably small children, may ingest peeling or flaking LCPs. The generation of airborne lead containing dust created during renovation, demolition, or construction activities (i.e., during sanding and grinding), or like actions on deteriorated painted surfaces also comprises a potential health concern.

In 1976, the federal government passed the Hazardous Products (Liquid Coating Materials) Regulations under the Hazardous Products Act limiting the amount of lead for interior paints to 0.5%. Exterior and commercial paints could still contain lead. In 1991, members of the Canadian Paint and Coatings Association agreed to voluntarily eliminate all added lead from their products. In November 2010, under the Canadian Hazardous Products Act, the Federal Government issued revisions to the Surface Coating Materials Regulations SOR/2005-109, which limits the amount of lead permissible in paints and other surface coating materials to 0.009% lead by dry weight (i.e., 90 micrograms per gram [ $\mu\text{g/g}$ ]).

There were no structures on the Site within the scope of this assessment, and therefore LCPs are not considered an environmental concern at the Site.

### **6.4.3 Mercury**

Minor amounts of mercury are commonly found in a variety of building materials including mercury vapour lamps and thermostats and other electrical control switches. There were no structures on the Site within the scope of this assessment and therefore, mercury is not expected to be an environmental concern at the Site.

## **6.5 Mechanical Equipment**

Mechanical equipment including piston type elevators, vehicle hoists, loading dock lifts, and compactors comprise typical hydraulically operated devices. Such equipment contains hydraulic oils, which are operated under high pressures and can be released into the environment because of leaks or equipment failure.

No mechanical equipment was noted on the Site. Auto dealerships and service garages were noted south of the Site along Oakwood Drive, therefore mechanical equipment may be present at those properties.

## 6.6 Methane

Methane is a colourless and odourless gas commonly formed by the decomposition of organic material. Methane is a large component of natural gas associated with active and closed waste disposal sites. Natural sources of methane include marshes, swamps, bogs, fens or coal and/or peat deposits. Potential risks associated with methane include explosion hazards where methane enters closed spaces and concentrations exceed the lower explosive limit.

Based on observations made at the time of the reconnaissance, as well as the historical review completed, significant amounts of fill materials are not inferred to have historically been placed on the Site. Therefore, methane is not considered to be present at the Site. In addition, the Site is not located within 1 km of a landfill.

Consequently, methane gas is not inferred to be a significant environmental issue at the Site.

## 6.7 Mould

Moulds (also known as “fungi”) are present everywhere in the natural environment, indoors and outdoors. Exposure to mould may occur indoors on water damaged building materials during occupancy, building maintenance and/or repair operations. The most common types of moulds are generally not hazardous. However, some moulds may be problematic to some people.

There were no structures on the Site within the scope of this assessment and therefore, mould is not considered a concern.

## 6.8 Odour

During the reconnaissance, Wood did not identify any strong, pungent or noxious odours attributable to the Site.

## 6.9 Ozone-Depleting Substances

ODSs include any substances containing chlorofluorocarbon (CFC), hydrochlorofluorocarbon (HCFC), halon or any other material capable of destroying ozone in the atmosphere. ODSs have been used in rigid polyurethane foam and insulation, laminates, aerosols, air conditioners, fire extinguishers, cleaning solvents and the sterilization of medical equipment. Federal regulations introduced in 1995 required the elimination of production and import of CFCs by January 1, 1996 (subject to certain

essential uses) and a freeze on the production and import of HCFC-22 by January 1, 1996. These regulations also require the complete elimination of HCFC-22 by the year 2020.

No ODSs were observed during the reconnaissance.

## 6.10 Pesticides and Herbicides

Wood did not observe any pesticides or herbicides stored at the Site during the reconnaissance, and as the Site is primarily a roadway, it is unlikely that pesticides or herbicides have historically been used at the Site. While a small portion of the Site does include 7047 Reixinger Road, the concerns associated with the historic use of pesticides/herbicides in that agricultural field are included under separate cover.

## 6.11 Polychlorinated Biphenyls

PCBs were most commonly used in capacitors, transformers, circuit breakers, switchgears and lamp ballasts as synthetic insulating materials. The use of PCBs in electrical equipment was prohibited on July 1, 1980. However, PCBs may be present in older hydraulic equipment still in use after the July 1, 1980 cut-off date.

### 6.11.1 Electrical Transformers

As noted in Section 2.0, there is no electrical service connected to the Site, however, there are aboveground hydro lines-oriented north to south along the west side of the Site.

According to the Client, one transformer is located at 7606 Oakwood Drive, related to operations of the pump station.

### 6.11.2 Light Ballasts

No buildings were present on-site and therefore no lights ballasts were present on-Site.

### 6.11.3 PCB Storage Sites

As discussed in Section 5.4.3, the reviewed MOE “*Ontario Inventory of PCB Storage Sites*” did not list the Site or surrounding properties as registered PCB waste storage sites.

## 6.12 Radioactive Materials

The Canadian Nuclear Safety Commission (CNSC), formerly the Atomic Energy Control Board, under the Nuclear Safety and Control Act, is responsible for the management and licensing of radioactive materials, to ensure that the use of nuclear energy does not pose undue risk to health, safety, security and the environment. The CNSC achieves regulatory control of nuclear facilities and nuclear materials through a comprehensive licensing system, which is administered through the cooperation of federal and provincial government departments such as health, environment, transport and labour.

Radioactive materials or equipment (labelled as such) was not observed at the Site. No testing for the presence of radioactive material was undertaken.

## 6.13 Radon

Radon is a naturally occurring gas produced by the decay of Uranium-238 that tends to concentrate in formations of granite, sandstone, coal, phosphate and uranium deposits. Radon is colourless, odourless and tasteless and tends to percolate up through soil where it may enter and accumulate in basements of buildings through foundation cracks and joints. Because the existence of radon is dependent upon geological factors, it is more of a regional concern than site-specific.

The concentration of radon daughters is measured in units of working level (WL), which is a measure of the potential alpha particles energy per litre of air. The annual exposure limit for the public is 0.01 WL with the annual occupational exposure limit being 4.0 WL. In homes and other non-occupational settings, the maximum permissible annual average concentration of radon daughters caused by the operation of a nuclear facility is 0.02 WL. Health Canada recommends 0.1 WL as an upper limit.

The location of the Site was evaluated against the locations of a soil radon gas study published by the Ontario Geological Survey (OGS) entitled “*Soil Radon Gas Study of Southern Ontario*” (OGS, Open File Report 5847, 1993). The City and the location of the Site are not within the four main study areas investigated by the OGS. Wood is not aware of other records of the presence or emission of radon gas in the immediate area of the City.

Based on the information obtained from the previously referenced sources, Wood does not suspect radon gas to be a significant environmental issue at the Site.

## 6.14 Site In-Filling

Based on observations made at the time of the reconnaissance, the presence of significant amounts of fill material is inferred to be present at the Site. This fill material is inferred to be primarily asphalt and granular fill to support the roadway. However, there may be some soil fill material that was used to elevate the roadway prior to application of the granular base. The topography across the Site was generally flat with sloping to either side of the roadway.

## 6.15 Spills, Surface Staining and Stressed Vegetation

Wood conducted a walk-around of the Site to identify any areas of significant surface staining, stressed vegetation or any other potential indicators of surface spills or leaks. Wood did not observe evidence of chemical spills or accidental releases at the time of the Site visit.

## 6.16 Storage Tanks

### 6.16.1 Aboveground Storage Tanks

During the reconnaissance, Wood noted the presence of three ASTs, as noted in Section 6.3. One fuel AST was located at each of the following properties: 7606 Oakwood Drive (diesel; part of the Site), 8108 Heartland Forest Road, and 7770 Canadian Drive.

### 6.16.2 Underground Storage Tanks

The Client advised Wood that there are currently no USTs at the Site, nor were they aware of any present historically at the Site. Wood did not observe fill or vent pipes during the Site reconnaissance that would suggest the presence of USTs on Site.

## 6.17 Urea Formaldehyde Foam Insulation

Urea formaldehyde foam insulation (UFFI) is a thermal insulation material that is pumped into interstitial spaces between the walls of buildings where it hardens to form a solid layer of insulation. The sale and installation of UFFI was banned for health-related reasons because of the formation of formaldehyde gas, which is released from the UFFI to the building interior.

There were no structures on the Site within the scope of this assessment and therefore, UFFI is not considered to be present.

## 6.18 Waste Management

### 6.18.1 Liquid Waste

As mentioned in section 4.5, 7606 Oakwood Drive was listed intermittently as a hazardous waste generator from 2002 to 2016 for light fuels and PCBs. This property also had a CofA for industrial air and municipal and private sewage in 2000.

### 6.18.2 Solid Waste

As mentioned in sections 4.5, 5.3, and 5.4, the Site is not listed in the 2015 MECP computer database nor in the EcoLog ERIS report as a generator of solid hazardous waste.

## 6.19 Wells

Ontario Regulation 903 (*O. Reg. 903*) (amended to *O. Reg. 128/03*) sets the standards for the construction, maintenance and abandonment of water wells and licensing of water well contractors and technicians in the province of Ontario. Under the regulation, any well that is not being used or maintained for future use, as a well must be abandoned in accordance with the procedures set forth in the regulation. This regulation also applies to monitoring and test wells such as those routinely installed for environmental and/or geotechnical testing purposes. Artesian or flowing wells must also be abandoned unless a device can be installed to prevent the well from flowing. *O. Reg. 903* also applies to dry wells or to wells that permit the movement of natural gas or other contaminants between subsurface formations or between formations and the ground surface. *O. Reg. 903* does not apply to oil and gas wells.

### 6.19.1 Water Wells

The safety of drinking water in the province of Ontario is legislated under the Drinking Water Systems Regulation (known as *O. Reg. 170/03*; amended to *O. Reg. 165/04*) made under the *Safe Drinking Water Act*. The regulation defines requirements for the following types of systems that supply potable water in the province: “large municipal non-residential systems”, “large municipal residential systems”, “large non-municipal non-residential systems”, “non-municipal seasonal residential systems”, “non-municipal year-round residential systems” and “public facilities”.

A review of the MECP Well Records and Ecolog ERIS report indicated that there were several records of both domestic drinking water wells and monitoring wells within the vicinity of each Section of the Site. Additionally, as indicated in the Wood WWTP Phase II ESA, the Owner of 6811 Reixinger Road indicated that there is a well at the property, which is no longer in use but had previously been used in support of the cattle farming that had taken place.

### **6.19.2 Other Wells**

No test wells, disposal wells, oil wells or gas wells were observed at the Site by Wood during the reconnaissance. Wood is not aware of any historic wells having ever been present at the Site in the past. A search of the Ontario Oil, Gas & Salt Resource Library identified several abandoned gas show wells primarily located south of Section A. Additionally, an unknown dry well was historically located north of Section B. These wells were drilled between the years of 1908 and 1960.

### **6.20 Other Observations**

Based on the reconnaissance there were no other observations of any environmental significance regarding the Site.

## 7.0 CONCLUSIONS & RECOMMENDATIONS

The Site is an irregular-shaped property, approximately 5.2 km in length. The Site was primarily flat, except for slopes down towards ditches on either side of the roadway. The surface of the Site consisted mainly of asphalt and gravel, with some grass and vegetation in Sections A and D. The surface of the Site was primarily asphalted roadway.

Based on a review of the available information sources, the majority of properties surrounding the Site were agricultural/vacant until prior to 1954, when development of industrial/commercial/ residential properties began in the area of the Site. A railway (industrial land use) has been present since prior to 1934 and crosses Section B of the Site (Montrose Road) just south of the Welland River.

Based on a review of the available information sources and on observations of current and historical surrounding properties (from publicly accessible locations), the following represents PCAs which result in APECs on the Site:

- 7606 Oakwood Drive was found to have a diesel fuel AST and transformer on-Site, and was also listed in the February 2020 Golder Report as having registered fuel storage tanks and has been a registered hazardous waste generator for liquid fuels and PCBs;
- The presence of a diesel fuel AST at 8108 Heartland Forest Road;
- The presence of a liquid fuel AST at 7770 Canadian Drive;
- The industrial land use (railway) that crosses Section B (Montrose Road) of the Site; and
- Commercial/industrial properties located along Montrose Road (Section B), most notably 9514 (including a spill of diesel fuel), 9127, and 8485 Montrose Road.

The following table represents PCAs both on and off-Site which result in APECs on the Site:

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-1: Presence of Diesel AST	7606 Oakwood Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	On-Site	pH, EC, SAR, Metals, As, Sb, Se, PHCs, and BTEX	Soil and Ground Water
APEC-2: Presence of Transformer	7606 Oakwood Drive	PCA # 55 – Transformer Manufacturing, Processing and Use	On-Site	PHCs, BTEX, and PCBs	Soil and Ground Water
APEC-3: Spill of Diesel Fuel	Montrose Road between Reixinger Road and the Welland River	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and BTEX	Ground Water

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-4: Industrial Land Uses, Spills, PCB Storage, ASTs	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks PCA #33 – Metal Treatment, Coating, Plating and Finishing PCA #34 – Metal Fabrication PCA #39 – Paints Manufacturing, Processing and Bulk Storage PCA #57 – Vehicles and Associated Parts Manufacturing	Off-Site	EC, SAR, pH, Metals, As, Sb, Se, PHCs, VOCs, PCBs, and PAHs	Ground Water
APEC-5: Railway	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #46 – Rail Yards, Tracks and Spurs	On-Site	Metals including As, Sb, Se, PHCs, VOCs, and PAHs	Soil
APEC-6: Chemical and Pharmaceutical Research Company at 8485 Montrose Road	Montrose Road Between Blackburn Parkway to 100 m South of Blackburn Parkway	PCA #8 – Chemical Manufacturing, Processing and Bulk Storage PCA #42 – Pharmaceutical Manufacturing and Processing	Off-Site	pH, EC, SAR, Metals, As, Sb, Se, and VOCs	Ground Water

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-7: Diesel Fuel AST Located at 8108 Heartland Forest Road	Brown Road Between Heartland Forest Road and 50 m East of Heartland Forest Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and VOCs	Ground Water
APEC-8: Liquid Fuel AST Located at 7770 Canadian Drive	Montrose Road Between Canadian Drive and 50 m South of Canadian Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and VOCs	Ground Water

\*Potentially Contaminating Activity (PCA) described specifically for the Site with reference to the applicable item number in the Table of Potentially Contaminating Activities provided in Schedule D of *O. Reg. 153/04* as amended, where applicable.

PHCs – Petroleum Hydrocarbons

BTEX – Benzene, Toluene, Ethylbenzene, Xylenes

PCBs – Polychlorinated Biphenyls

PAHs – Polycyclic Aromatic Hydrocarbons

VOCs – Volatile Organic Compounds

EC – Electrical Conductivity

SAR – Sodium Adsorption Ratio

As – Arsenic

Sb – Antimony

Se - Selenium

Based on the Phase I ESA completed by Wood, there is evidence of actual and potential contamination associated with the Site from on-Site and off-Site land uses. An intrusive investigation (i.e., Phase II ESA) is recommended to address the APECs.

## 8.0 ASSESSOR QUALIFICATIONS

The report was prepared and reviewed by the undersigned, employees of Wood Environment & Infrastructure Solutions, a Division of Wood Canada Limited. Wood is one of North America's leading engineering firms, with more than 50 years of experience in the earth and environmental consulting industry. The qualifications of the assessors involved in the preparation of this report are provided in **Appendix E**.

## 9.0 CLOSURE

This report was prepared for the exclusive use of RMON and is intended to provide a Phase I ESA of the Site described as Reixinger Road between 6811 Reixinger Road and Montrose Road, Montrose Road from Reixinger Road to Canadian Drive, Brown Road from Heartland Forest Road to Montrose Road, and the section of land that extends west from 7606 Oakwood Drive to Montrose Road, located in Niagara Falls, Ontario, at the time of the Site visit. Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of the third party. Should additional parties require reliance on this report, written authorization from Wood will be required. With respect to third parties, Wood has no liability or responsibility for losses of any kind whatsoever, including direct or consequential financial effects on transactions or property values, or requirements for follow-up actions and costs.

The report is based on data and information collected during the Phase I ESA of the property conducted by Wood. It is based solely on the conditions of the Site encountered at the time of the Site visit on November 3, 2020 supplemented by a review of historical information and data obtained by Wood as described in this report, and discussion with a representative of the owner/occupant, as reported herein. Except as otherwise maybe specified, Wood disclaims any obligation to update this report for events taking place, or with respect to information that becomes available to Wood after the time during which Wood conducted the Phase I ESA.

In evaluating the property, Wood has relied in good faith on information provided by other individuals noted in this report. Wood has assumed that the information provided is factual and accurate. In addition, the findings in this report are based, to a large degree, upon information provided by the current owner/occupant. Wood accepts no responsibility for any deficiency, misstatement or inaccuracy contained in this report as a result of omissions, misinterpretations or fraudulent acts of persons interviewed or contacted.

Wood makes no other representations whatsoever, including those concerning the legal significance of its findings, or as to other legal matters touched on in this report, including, but not limited to, ownership of any property, or the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes are subject to interpretation and change. Such interpretations and regulatory changes should be reviewed with legal counsel.

This Report is also subject to the further Standard Limitations contained in **Appendix F**.

We trust that the information presented in this report meets your current requirements. Should you have any questions, or concerns, please do not hesitate to contact the undersigned.

Respectfully Submitted,

**Wood Environment & Infrastructure Solutions,  
a Division of Wood Canada Limited.**

Hello,

Can you please inform me of any spills, fuel storage tanks, complaints or issues with the following addresses in Niagara Falls, Ontario:

Montrose Road:

- 9515
- 9127
- 8485
- 8675

Canadian Drive:

- 7770

Blackburn Parkway:

- 7695

Heartland Forest Road:

- 8108

Oakwood Drive:

- 7606
- 7838
- 7848

In advance, thank you for your assistance.

Attention: Mr. Alex Herlovitch – Deputy Director of Planning and Development

**Re: Phase I Environmental Site Assessment  
7606 Oakwood Drive and Road Allowance: Parts of Reixinger Road, Brown Road, and  
Montrose Road  
Niagara Falls, ON**

Dear Mr. Herlovitch:

We have been retained to undertake a Phase I Environmental Site Assessment on the above referenced property. As such, we would appreciate a review of your files regarding any environmental concerns associated with it, or the surrounding lands.

Please do not hesitate to contact the undersigned if you require any further information to complete your records search.

The search fee and site location plan are attached. Please note that the site for this request is highlighted in purple.

Additionally, we have attached a cheque for a total of \$300.00 (or 1 cheque for \$200.00 and another cheque for \$100.00). This payment covers this search fee, as well as the remaining balance on a search fee that Wood submitted to the City, dated August 24, 2020 for the following Site: 6811, 7047 Reixinger Road (Job # OESAM2008.3000). Please kindly forward a receipt with your response.

Thank you for your earliest response.

Regards,

**Wood Environment and Infrastructure Solutions**

Tenant (if applicable)	

2. Owner

Date of Ownership (yyyy/mm/dd)

Tenant (if applicable)

**3. Search Parameters**

Search Parameters	Specify Year(s) Requested
Environmental concerns (General correspondence, occurrence reports, abatement)	All
Orders	All
Spills	All
Investigations/prosecutions ► Owner and tenant information must be provided	All
Waste Generator number/classes	All

Files older than 2 years may require \$60.00 retrieval cost. There is no guarantee that records responsive to your request will be located.

**4. Environmental Compliance Approvals/Certificates of Approval**

Environmental Compliance Approvals/Certificates of Approval	SD	Specify Year(s) Requested
air - emissions	<input checked="" type="checkbox"/>	1985-Present
renewable energy	<input checked="" type="checkbox"/>	1985-Present
water - mains, treatment, ground level, standpipes & elevated storage, pumping stations (local & booster)	<input checked="" type="checkbox"/>	1985-Present
sewage - sanitary, storm, treatment, stormwater, leachate & leachate treatment & sewage pump stations	<input checked="" type="checkbox"/>	1985-Present
waste water - industrial discharge	<input checked="" type="checkbox"/>	1985-Present
waste sites - disposal, landfill sites, transfer stations, processing sites, incinerator sites	<input checked="" type="checkbox"/>	1985-Present
waste systems - haulers: sewage, non-hazardous & hazardous waste, mobile waste processing units, PCB destruction	<input checked="" type="checkbox"/>	1985-Present

Proponent information must be provided and Environmental Compliance Approval/Certificate of Approval number(s) (if known). 1985 and prior records are searched manually. Search fees in excess of \$300.00 may be incurred, depending on the types and years to be searched. Specify Approval number(s) (if known). If supporting documents are also required, mark SD box and specify type e.g. maps, plans, reports, etc.

<b>RECORD OF INTERVIEW – PROJECT # OESAM2008</b>	
<b>Purpose of Interview (PI ESA / Due Diligence ESA)</b>	Due Diligence Phase I ESA
<b>Date of Interview</b>	November 23, 2020 <span style="float: right;"><b>Format (phone / meeting)</b></span>
<b>Site Address</b>	Proposed SNF WWTP Alignment and Construction Shaft
<b>Interviewee &amp; Affiliation &amp; Contact Number</b>	Jade Anema, W-WW Engineering (Region); 289-241-5705
<b>Wood Interviewer / Office Location</b>	Braedan Huras - Thorold/St. Catharines Office
<b>SITE INFORMATION</b>	
<p>1) Describe land use history. Was the property ever used for industrial use, dry cleaning, a garage or bulk liquid dispensing facility, including a gasoline outlet?                      No, the site was only known as South Side High Lift</p>	
<p>2) Are you aware of any environmental issues associated with the subject property such as waste disposal, landfilling, chemical use and / or storage (including spills), above or underground storage tanks, MOE orders, etc.? (obtain details)    Yes    No                      No known spills. The ERIS "spills" were confirmed to be CSO overflow due to wet weather events when the combined sewer overflow outfalls into the hydro canal. No fuel was spilled.</p>	
<p>3) Are you aware of any environmental building management issues such as asbestos containing materials, PCBs in electrical equipment, odour, mould, indoor air quality, UFFI, ODSs, lead-based paints, etc.? (obtain details)    Yes    <input checked="" type="checkbox"/> No</p>	
<p>4) Are you aware of any site-specific permits, waste generator number(s), certificates of approval, water well records or sewer use / discharge permits?    Yes    No</p>	
<p>5) Are you aware of any current or historical environmental concerns associated with adjacent properties? (obtain details)                      Yes    <input checked="" type="checkbox"/> No</p>	
<p>6) Are you aware of any previous environmental investigations, inspections, audits or reports (e.g., environmental assessment and remediation, tank removals, asbestos or mould surveys) for the subject property or adjacent properties?    Yes    <input checked="" type="checkbox"/> No</p>	
<p>7) Is there anyone else Wood should contact for additional environmental information? (name, title, phone no.)    Yes    <input checked="" type="checkbox"/> No                      I have sent the survey to others within the Region to find more information</p>	

Are additional pages attached: Yes/No, If so how many?\_\_

Hi Braedan,

See attached and below for answers regarding the Phase 1 ESA.

- The tank adjacent to the generator buildings are diesel tanks. There is a day tank on the inside of the building at SSHL as well.
- No other chemicals stored on site
- The pad mount transformer just outside the electrical room was replaced as part of the 2015 Upgrades project.
- No known site history
- No fuel spills

**Subject:** Proposed SNF WWTP Alignment and Construction Shaft Locations - Phase I ESA Record of Interview

**CAUTION:** This email originated from outside of the Niagara Region email system. Use caution when clicking links or opening attachments unless you recognize the sender and know the content is safe.

Good Afternoon,

I am working on the Phase I ESA for the SNF WWTP sewer alignment and construction shaft locations. Please see attached Record of Interview form to be included in the Phase I ESA report. Could someone with knowledge of the site or any possible environmental concerns surrounding the site please fill out the form and send it back to me? Also, could that individual, or anyone else familiar with the site, please answer the following questions:

1. While on-Site I noted the presence of above-ground storage tanks (ASTs) at the High Lift Pumping Station, and the pumping station near the intersection of Heartland Forest Rd and Brown Rd. What type of fuel is contained in these tanks and can the usage of these tanks be explained please?
2. Are there any chemicals, transformers, potential PCB-containing electrical units, or other materials stored/used at the pumping stations that may affect the environmental condition of the Site?
3. In the ERIS desktop review report prepared by Golder in February 2020, several spills were noted at the High Lift Pumping Station (7606 Oakwood Dr) in 2009, 2014, and 2019, with environmental impact confirmed. Is there any additional information that can be provided regarding these spills? I.e., specific contaminants, whether or not a remediation was completed, etc?

Thank you and I look forward to hearing back,  
Braedan

<b>Client Name:</b>		Modern Mosaic Limited			
<b>Client Address:</b>		8620 Oakwood Drive			
<b>Client City:</b>		Niagara Falls			
<b>Client Postal Code:</b>		L2E 6S5			
<b>Project Description:</b>		Modern Mosaic produces concrete forms used in the construction of large buildings. The process has two wastewater streams coming from concrete washing and concrete form finishing. The wastewater streams are to be combined to neutralize the pH. The wastewater travels off-site via a drainage ditch and ultimately drains into the Ontario Power Generation Canal and Niagara River

<b>Client Name:</b>		Modern Mosaic Limited			
<b>Client Address:</b>		8620 Oakwood Drive			
<b>Client City:</b>		Niagara Falls			
<b>Client Postal Code:</b>		L2E 6S5			
<b>Project Description:</b>		Approval is sought for sources of air emissions generated from facility operations of mixing aggregate, sand and cement to produce concrete forms. The sources include fugitive emissions from wood constructed forms, pouring of concrete, general maintenance and comfort heating.

**Description:**

On March 20, 2009, ian M. Herd was sentenced ex parte, to six months in jail after being convicted on August 15, 2008 for failing to have oil-contaminated soil transported to an approved waste management facility by an approved waste hauler and failing to submit copies of all manifests and receipts to the ministry. An order was also issued to Mr. Herd and 1499974 Ontario Inc. to clean up the site in St. Catharines. Since Mr. Herd was not in attendance at the time of sentencing, a committal warrant was issued for his arrest. The Court heard that Mr. Herd is the sole director of 1499974 Ontario Inc. In April of 2006, the company purchased a property on Reixinger Road in Niagara Falls that contained an abundance of scrap metal, tires and liquid automobile wastes in barrels. In August of 2006, ministry staff issued an order to the company and Mr. Herd, requiring the removal of the oil-contaminated soil at the property and submission of all receipts related to the clean-up. Mr. Herd failed to comply with the order. Mr. Herd and the company were charged following an investigation by the Ministry of the Environment's Investigations and Enforcement Branch. Mr. Herd had previously been convicted of two other offences under the Environmental Protection Act. In 2004, he was convicted of operating a waste disposal site for tires in Belleville without a Certificate of Approval. A fine of \$13,000 was imposed, as well as a court order to clean up the site. He was then charged with failing to comply with the court order and pleaded guilty to the charge in June 2008. In September 2008, he was sentenced to sixty days in jail to be served intermittently, and two years of probation. His fine was suspended and a second court order was issued.

**Investigation 1:**

**Investigation 2:**

**Penalty Imposed:**

**Description:**

Modern Mosaic Limited has been fined \$21,000 after pleading guilty to three counts under the Ontario Water

Resources Act (OWRA). The company produces specialty concrete forms at a facility in Niagara Falls. The process requires the use of acids to etch the external surfaces of the poured concrete. The acids are then washed off, collected and drained to a sewage works located on the property as wastewater that is required to be treated. This process has been approved by the Ministry of the Environment through a Certificate of Approval. In August 2003, ministry staff inspected the facility and found that the existing sewage works had been altered without ministry approval and that the wastewater generated from the concrete forming operation was not being treated in accordance with its Certificate of Approval. The matter was referred to MOE's Investigations and Enforcement Branch and charges were laid. On October 21, 2005, Modern Mosaic Limited pleaded guilty to one count of discharging a material that may impair the quality of water, contrary to Section 30(1) of the OWRA, and two counts of failing to comply with conditions of its Certificate of Approval, contrary to Section 107(3) of the act. The company was fined \$8,000 on the first count, \$5,000 on the second and an additional \$8,000 on the third for a total of \$21,000. The fines are exclusive of victim fine surcharges.

**District Area:**  
**Type of Concern:** Policy and Guidelines  
**Contaminant:** see "Status Report"  
**Status Report:** Exceeded guidelines for biochemical oxygen demand and total suspended solids once each during the reporting period. Both exceedances were attributed to operational problems of the wastewater treatment plant. Company has improved operation and compliance is expected in 1993. This plant will be closed in early 1994, and all direct wastewater discharges will cease at that time.

# Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " \* " indicates that the database will no longer be updated. See the individual database description for more information.

## **Abandoned Aggregate Inventory:**

Provincial [AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.\*

**Government Publication Date: Sept 2002\***

## **Aggregate Inventory:**

Provincial [AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

**Government Publication Date: Up to Sep 2020**

## **Abandoned Mine Information System:**

Provincial [AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

**Government Publication Date: 1800-Oct 2018**

## **Anderson's Waste Disposal Sites:**

Private [ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

**Government Publication Date: 1860s-Present**

## **Aboveground Storage Tanks:**

Provincial [AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

**Government Publication Date: May 31, 2014**

## **Automobile Wrecking & Supplies:**

Private [AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

**Government Publication Date: 1999-Jun 30, 2020**

## **Borehole:**

Provincial [BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

**Government Publication Date: 1875-Jul 2018**

**Certificates of Approval:**

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

**Government Publication Date: 1985-Oct 30, 2011\***

**Dry Cleaning Facilities:**

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Environment and Climate Change Canada cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

**Government Publication Date: Jan 2004-Dec 2017**

**Commercial Fuel Oil Tanks:**

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

**Government Publication Date: Jul 31, 2020**

**Chemical Manufacturers and Distributors:**

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

**Government Publication Date: 1999-Jan 31, 2020**

**Chemical Register:**

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

**Government Publication Date: 1999-Jun 30, 2020**

**Compressed Natural Gas Stations:**

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

**Government Publication Date: Dec 2012 - Sep 2020**

**Inventory of Coal Gasification Plants and Coal Tar Sites:**

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.\*

**Government Publication Date: Apr 1987 and Nov 1988\***

**Compliance and Convictions:**

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

**Government Publication Date: 1989-Dec 2019**

**Certificates of Property Use:**

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

**Government Publication Date: 1994-Sep 30, 2020**

**Drill Hole Database:**

Provincial [DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

**Government Publication Date: 1886 - Sep 2019**

**Delisted Fuel Tanks:**

Provincial [DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

**Government Publication Date: Jul 31, 2020**

**Environmental Activity and Sector Registry:**

Provincial [EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

**Government Publication Date: Oct 2011-Oct 31, 2020**

**Environmental Registry:**

Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

**Government Publication Date: 1994-Sep 30, 2020**

**Environmental Compliance Approval:**

Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

**Government Publication Date: Oct 2011-Oct 31, 2020**

**Environmental Effects Monitoring:**

Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

**Government Publication Date: 1992-2007\***

**ERIS Historical Searches:**

Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

**Government Publication Date: 1999-Jul 31, 2020**

**Environmental Issues Inventory System:**

Federal [EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

**Government Publication Date: 1992-2001\***

**Emergency Management Historical Event:**

Provincial **EMHE**

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

**Government Publication Date: Dec 31, 2016**

**Environmental Penalty Annual Report:**

Provincial **EPAR**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land / water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

**Government Publication Date: Jan 1, 2011 - Dec 31, 2019**

**List of Expired Fuels Safety Facilities:**

Provincial **EXP**

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

**Government Publication Date: Jul 31, 2020**

**Federal Convictions:**

Federal **FCON**

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

**Government Publication Date: 1988-Jun 2007\***

**Contaminated Sites on Federal Land:**

Federal **FCS**

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

**Government Publication Date: Jun 2000-Sep 2020**

**Fisheries & Oceans Fuel Tanks:**

Federal **FOFT**

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

**Government Publication Date: 1964-Sep 2019**

**Federal Identification Registry for Storage Tank Systems (FIRSTS):**

Federal **FRST**

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

**Government Publication Date: May 31, 2018**

**Fuel Storage Tank:**

Provincial **FST**

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

**Government Publication Date: Jul 31, 2020**

**Fuel Storage Tank - Historic:**

Provincial

[FSTH](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

**Government Publication Date: Pre-Jan 2010\***

**Ontario Regulation 347 Waste Generators Summary:**

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

**Government Publication Date: 1986-Jul 31, 2020**

**Greenhouse Gas Emissions from Large Facilities:**

Federal

[GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO<sub>2</sub> eq).

**Government Publication Date: 2013-Dec 2018**

**TSSA Historic Incidents:**

Provincial

[HINC](#)

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

**Government Publication Date: 2006-June 2009\***

**Indian & Northern Affairs Fuel Tanks:**

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

**Government Publication Date: 1950-Aug 2003\***

**Fuel Oil Spills and Leaks:**

Provincial

[INC](#)

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing is a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

**Government Publication Date: Jul 31, 2020**

**Landfill Inventory Management Ontario:**

Provincial

[LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

**Government Publication Date: Feb 28, 2019**

**Canadian Mine Locations:**

Private

[MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

**Government Publication Date: 1998-2009\***

**Mineral Occurrences:**

Provincial [MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

**Government Publication Date: 1846-Jan 2020**

**National Analysis of Trends in Emergencies System (NATES):**

Federal [NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

**Government Publication Date: 1974-1994\***

**Non-Compliance Reports:**

Provincial [NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

**Government Publication Date: Dec 31, 2018**

**National Defense & Canadian Forces Fuel Tanks:**

Federal [NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

**Government Publication Date: Up to May 2001\***

**National Defense & Canadian Forces Spills:**

Federal [NDSP](#)

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

**Government Publication Date: Mar 1999-Apr 2018**

**National Defence & Canadian Forces Waste Disposal Sites:**

Federal [NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

**Government Publication Date: 2001-Apr 2007\***

**National Energy Board Pipeline Incidents:**

Federal [NEBI](#)

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

**Government Publication Date: 2008-Mar 31, 2020**

**National Energy Board Wells:**

Federal [NEBP](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

**Government Publication Date: 1920-Feb 2003\***

**National Environmental Emergencies System (NEES):**

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

**Government Publication Date: 1974-2003\***

**National PCB Inventory:**

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

**Government Publication Date: 1988-2008\***

**National Pollutant Release Inventory:**

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

**Government Publication Date: 1993-May 2017**

**Oil and Gas Wells:**

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at [www.nickles.com](http://www.nickles.com).

**Government Publication Date: 1988-Aug 31, 2020**

**Ontario Oil and Gas Wells:**

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

**Government Publication Date: 1800-Jun 2020**

**Inventory of PCB Storage Sites:**

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

**Government Publication Date: 1987-Oct 2004; 2012-Dec 2013**

**Orders:**

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

**Government Publication Date: 1994-Sep 30, 2020**

**Canadian Pulp and Paper:**

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

**Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014**

**Parks Canada Fuel Storage Tanks:**

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

**Government Publication Date: 1920-Jan 2005\***

**Pesticide Register:**

Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

**Government Publication Date: Oct 2011-Oct 31, 2020**

**Pipeline Incidents:**

Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

**Government Publication Date: Oct 31, 2020**

**Private and Retail Fuel Storage Tanks:**

Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

**Government Publication Date: 1989-1996\***

**Permit to Take Water:**

Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

**Government Publication Date: 1994-Sep 30, 2020**

**Ontario Regulation 347 Waste Receivers Summary:**

Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

**Government Publication Date: 1986-2016**

**Record of Site Condition:**

Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

**Government Publication Date: 1997-Sept 2001, Oct 2004-Sep 2020**

**Retail Fuel Storage Tanks:**

Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

**Government Publication Date: 1999-Jun 30, 2020**

**Scott's Manufacturing Directory:**

Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

**Government Publication Date: 1992-Mar 2011\***

**Ontario Spills:**

Provincial SPL

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

The Ministry of the Environment, Conservation and Parks cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

**Government Publication Date: 1988-Nov 2019**

**Wastewater Discharger Registration Database:**

Provincial [SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

**Government Publication Date: 1990-Dec 31, 2017**

**Anderson's Storage Tanks:**

Private [TANK](#)

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

**Government Publication Date: 1915-1953\***

**Transport Canada Fuel Storage Tanks:**

Federal [TCFT](#)

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

**Government Publication Date: 1970-Aug 2019**

**Variances for Abandonment of Underground Storage Tanks:**

Provincial [VAR](#)

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

**Government Publication Date: Jul 31, 2020**

**Waste Disposal Sites - MOE CA Inventory:**

Provincial [WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

**Government Publication Date: Oct 2011-Oct 31, 2020**

**Waste Disposal Sites - MOE 1991 Historical Approval Inventory:**

Provincial [WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30th, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

**Government Publication Date: Up to Oct 1990\***

**Water Well Information System:**

Provincial [WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

**Government Publication Date: Apr 30, 2020**

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

**APPENDIX E**

**QUALIFICATIONS OF THE ASSESSORS**

## QUALIFICATIONS OF THE ASSESSORS

### **Braedan Huras, B.Sc., EPt**

Environmental Technician

Mr. Braedan Huras is an Environmental Technician with experience conducting Phase One/I and Two/II Environmental Site Assessments (ESAs) for various clients. The Phase Two/II ESAs have included drilling, groundwater monitoring and sampling, and test pitting. He has been thoroughly trained to conduct Phase One/I Environmental Site Assessments (ESAs) in accordance with the Phase One/I ESA standards as defined by Ontario Regulation 153/04 and CAN/CSA Z768-01. Mr. Huras holds a B.Sc. (Hons.) in Integrated Science with a Concentration in Biology from McMaster University. He has a post graduate certificate in Environmental Management and Assessment from Niagara College, in addition, he is certified by Eco Canada as an Environmental Professional in Training.

### **Patrick Shriner, P.Geo.**

Associate, Environmental Geoscientist

Mr. Shriner is an Associate Environmental Geoscientist in Wood's Niagara (St. Catharines/Thorold) office. Patrick has over 30 years of experience on a wide range of environmental and municipal projects including: environmental site assessment (ESA) and remediation; peer review, designated substances surveys, waste management; landfill investigations and monitoring; hydrogeological investigations; risk assessment and risk management. Patrick is responsible for senior review and Quality Assurance of environmental projects and proposals undertaken by the Niagara office as well as senior technical support for the design, implementation and management of ESAs, site remediation projects, Brownfields clean-up and redevelopment. Patrick has participated in over 750 Phase I ESAs undertaken on behalf of a variety of clients including commercial and industrial manufactures, municipal governments, financial institutions and legal firms. Patrick is a recognized Qualified Person (QP) for ESAs under Ontario Regulation 153/04 – Records of Site Condition (RSC) and has filed several RSCs for a variety of properties across Ontario.

**APPENDIX F**  
**LIMITATIONS**

## LIMITATIONS

1. The work performed in the preparation of this report and the conclusions presented are subject to the following:
  - (a) The Standard Terms and Conditions which form a part of our Professional Services Contract;
  - (b) The Scope of Services;
  - (c) Time and Budgetary limitations as described in our Contract; and
  - (d) The Limitations stated herein.
2. No other warranties or representations, either expressed or implied, are made as to the professional services provided under the terms of our Contract, or the conclusions presented.
3. The conclusions presented in this report were based, in part, on visual observations of the Site and attendant structures. Our conclusions cannot and are not extended to include those portions of the Site or structures, which are not reasonably available, in Wood's opinion, for direct observation.
4. The environmental conditions at the Site were assessed, within the limitations set out above, having due regard for applicable environmental regulations as of the date of the inspection. A review of compliance by past owners or occupants of the Site with any applicable local, provincial or federal by-laws, orders-in-council, legislative enactments and regulations was not performed.
5. The Site history research included obtaining information from third parties and employees or agents of the owner. No attempt has been made to verify the accuracy of any information provided, unless specifically noted in our report.
6. Where testing was performed, it was carried out in accordance with the terms of our contract providing for testing. Other substances, or different quantities of substances testing for, may be present on Site and may be revealed by different or other testing not provided for in our contract.
7. Because of the limitations referred to above, different environmental conditions from those stated in our report may exist. Should such different conditions be encountered, Wood must be notified in order that it may determine if modifications to the conclusions in the report are necessary.
8. The utilization of Wood's services during the implementation of any remedial measures will allow Wood to observe compliance with the conclusions and recommendations contained in the report. Wood's involvement will also allow for changes to be made as necessary to suit field conditions as they are encountered.
9. This report is for the sole use of the party to whom it is addressed unless expressly stated otherwise in the report or contract. Any use which any third party makes of the report, in whole or the part, or any reliance thereon or decisions made based on any information or conclusions in the report is the sole responsibility of such third party. Wood accepts no responsibility whatsoever for damages or loss of any nature or kind suffered by any such third party as a result of actions taken or not taken or decisions made in reliance on the report or anything set out therein.
10. This report is not to be given over to any third party for any purpose whatsoever without the written permission of Wood.

11. Provided that the report is still reliable, and less than 12 months old, Wood will issue a third-party reliance letter to parties that the client identifies in writing, upon payment of the then current fee for such letters. All third parties relying on Wood's report, by such reliance agree to be bound by our proposal and Wood's standard reliance letter. Wood's standard reliance letter indicates that in no event shall Wood be liable for any damages, howsoever arising, relating to third-party reliance on Wood's report. No reliance by any party is permitted without such agreement.

## 1.0 INTRODUCTION

Wood Environment & Infrastructure Solutions, a Division of Wood Canada Limited (Wood) was retained by the Regional Municipality of Niagara (RMON; the Client) to conduct a Phase II Environmental Site Assessment (ESA) of the property referred to as the future Sewer Alignment & Construction Shafts for the future Wastewater Treatment Plant Site in Niagara Falls, Ontario (the Site). The Site includes the following:

- Reixinger Road, from 6811 Reixinger Road to Montrose Road;
- Montrose Road, from Reixinger Road to south of Canadian Drive;
- Brown Road, from Montrose Road to Heartland Forest Road; and
- A section of land extending in a straight-line west from 7606 Oakwood Drive (South Side High Lift Sewage Pumping Station; SSLH SPS) to south of Canadian Drive.

A key plan showing the location of the Site is provided on **Figure 1**.

At the time of the Phase II ESA, the Site was owned and maintained by the City of Niagara Falls (the City) and the RMON, depending on the section of roadway. The RMON partially owns and maintains (with Ontario Power Generation; OPG) the property at 7606 Oakwood Drive, Niagara Falls. **Figure 1** illustrates the lot configuration of the Site. The Client intends on installing a new sanitary sewer alignment and construction shafts at the Site.

The Client retained Wood to provide an evaluation of known and possible environmental issues at the Site. Prior to this Phase II ESA, Wood completed a Phase I ESA for the Client. The report, titled “*Phase I Environmental Site Assessment, Proposed Sewer Alignment & Construction Shafts for Future Wastewater Treatment Plant, Portions of Reixinger Road, Montrose Road, Brown Road and Oakwood Drive, Niagara Falls, Ontario*” and dated February 8, 2021 (2021 Phase I ESA), was provided to the Client under separate cover.

### 1.1 Background

The following is a summary of information obtained during the 2021 Phase I ESA:

*The Site is an irregular-shaped property, approximately 5.2 kilometres (km) in length. The Site was primarily flat, except for slopes down towards ditches on either side of the roadway. The surface of the Site consisted mainly of asphalt and gravel, with some grass and vegetation between 7606 Oakwood Drive and Montrose Road. The Queen Elizabeth Way highway (QEW) crosses the Site at Reixinger Road as well as the northern portion of the Site. The surface of the Site was primarily asphalted roadway.*

*Based on a review of the available information sources, the majority of properties surrounding the Site were agricultural/vacant until prior to 1954, when development of industrial/commercial/residential properties began in the area of the Site. A railway (industrial land use) has been present since prior to 1934 and crosses Montrose Road just south of the Welland River.*

*Based on a review of the available information sources and on observations of current and historical surrounding properties (from publicly accessible locations), the following represent potentially contaminating activities (PCAs) which result in areas of potential environmental concern (APECs) on the Site:*

- *7606 Oakwood Drive was found to have a diesel fuel aboveground fuel storage tank (AST) and transformer on-Site, and was also listed in a Technical Memorandum completed in February of 2020 by Golder Associates, provided to Wood by the Client, as having registered fuel storage tanks and has been a registered hazardous waste generator for liquid fuels and polychlorinated biphenyls (PCBs);*
- *The presence of a diesel fuel AST at 8108 Heartland Forest Road;*
- *The presence of a liquid fuel AST at 7770 Canadian Drive;*
- *The industrial land use (railway) that crosses Montrose Road; and*
- *Commercial/industrial properties located on the west side of Montrose Road, most notably 9514 (including a spill of diesel fuel), 9127, and 8485 Montrose Road.*

The PCAs and APECs are summarized in the following table:

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-1: Presence of Diesel AST	7606 Oakwood Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	On-Site	pH, EC, SAR, Metals, As, Sb, Se, PHCs, and BTEX	Soil and Ground Water
APEC-2: Presence of Transformer	7606 Oakwood Drive	PCA # 55 – Transformer Manufacturing, Processing and Use	On-Site	PHCs, BTEX, and PCBs	Soil and Ground Water
APEC-3: Spill of Diesel Fuel	Montrose Road between Reixinger Road and the Welland River	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and BTEX	Ground Water
APEC-4: Industrial Land Uses, Spills, PCB Storage, ASTs	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks PCA #33 – Metal Treatment, Coating, Plating and Finishing PCA #34 – Metal Fabrication PCA #39 – Paints Manufacturing, Processing and Bulk Storage PCA #57 – Vehicles and Associated Parts Manufacturing	Off-Site	EC, SAR, pH, Metals, As, Sb, Se, PHCs, VOCs, PCBs, and PAHs	Ground Water

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
APEC-5: Railway	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #46 – Rail Yards, Tracks and Spurs	On-Site	Metals including As, Sb, Se, PHCs, VOCs, and PAHs	Soil
APEC-6: Chemical and Pharmaceutical Research Company at 8485 Montrose Road	Montrose Road Between Blackburn Parkway to 100 m South of Blackburn Parkway	PCA #8 – Chemical Manufacturing, Processing and Bulk Storage PCA #42 – Pharmaceutical Manufacturing and Processing	Off-Site	pH, EC, SAR, Metals, As, Sb, Se, and VOCs	Ground Water
APEC-7: Diesel Fuel AST Located at 8108 Heartland Forest Road	Brown Road Between Heartland Forest Road and 50 m East of Heartland Forest Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and VOCs	Ground Water
APEC-8: Liquid Fuel AST Located at 7770 Canadian Drive	Montrose Road Between Canadian Drive and 50 m South of Canadian Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	Off-Site	PHCs and VOCs	Ground Water

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Location of PCA	Contaminants of Potential Concern	Media Potentially Impacted
<p>*Potentially Contaminating Activity (PCA) described specifically for the Site with reference to the applicable item number in the Table of Potentially Contaminating Activities provided in Schedule D of <i>O. Reg. 153/04</i> as amended, where applicable.</p> <p>PHCs – Petroleum Hydrocarbons                      BTEX – Benzene, Toluene, Ethylbenzene, Xylenes                      PCBs – Polychlorinated Biphenyls                      PAHs – Polycyclic Aromatic Hydrocarbons                      VOCs – Volatile Organic Compounds                      EC – Electrical Conductivity                      SAR – Sodium Adsorption Ratio                              As – Arsenic                      Sb – Antimony    Se - Selenium</p>					

A Phase II ESA was recommended to address the above-noted areas of potential environmental concern.

**1.2 Objective and Scope of Work**

Wood’s scope of work for the Investigation included the sampling of soil from eleven drilled boreholes and the installation of two ground water monitoring wells (with associated soil and ground water sampling and analytical programs) in an effort to determine Site characteristics and contaminants of potential concern (COPCs) including, metals, including hydrides, inorganics, including pH, EC and SAR, fractionized PHCs in the F1-F4 ranges, VOCs/BTEX, PAHs and PCBs.

As this work is not being completed to support a Record of Site Condition (RSC) under Ontario Regulation 153/04 (*O. Reg. 153/04*), as amended, all work completed under this project was performed in general accordance with standard engineering practices and the following documents:

- Ministry of the Environment (MOE) document entitled “*Guide for Completing Phase Two Environmental Site Assessments under Ontario Regulation 153/04*” dated June 2011;

- Ministry of the Environment and Energy (MOEE) document entitled “*Guidance on Sampling and Analytical Methods for Use at Contaminated Sites in Ontario*”, dated December 1996;
- MOE document entitled “*Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act*” issued by the Laboratory Services Branch of the MOE and dated March 9, 2004, amended as of July 1, 2011 (Analytical Protocol); and
- All analytical results were compared to the appropriate standards identified in the MOE (now known as the Ministry of the Environment, Conservation and Parks [MECP]) document entitled; “*Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act*” dated April 15, 2011 (MOE SCS).

All work completed during the Investigation was carried out in accordance with the Terms of Reference as provided in the Client’s RFQ (2020-Q-65), Wood’s proposal (POESAM2040) and authorized by the Client on June 18, 2020. It must be noted that the scope of work completed by Wood, as part of this assessment, may not be sufficient (in and of itself) to meet the reporting requirements for the submission of an RSC in accordance with *O. Reg. 153/04*, as amended. If an RSC is an intended product of work conducted at the Site, further consultation and/or work is required.

## 2.0 WORK PROGRAM AND METHODOLOGY

This section describes the methods used during this subsurface investigation work, including all drilling, and soil and ground water sampling activities. Laboratory quality assurance/quality control (QA/QC) procedures are also discussed.

Borehole drilling, soil sampling and ground water monitoring and sampling activities were undertaken between December 2, 2020 and May 13, 2022.

All borehole and monitoring well locations in the investigation area are illustrated on **Figure 1**. The sample locations selected to address the APECs identified during the Phase I ESA (refer to Section 1.1).

The borehole drilling, and soil and ground water sampling procedures used are detailed below.

### 2.1 Subsurface Investigations and Soil Sampling

#### 2.1.1 Borehole Drilling and Soil Sampling

The borehole drilling for this project was coordinated with a Geotechnical Investigation underway concurrently for the same project. The Client retained WSP for the Geotechnical Investigation, and the drilling subcontractor, Ponthil Drilling Services Inc. (Ponthil), of Mount Albert, Ontario (MECP License Number 7383/7644) was retained by WSP. Subsurface utility locates were completed by WSP prior to drilling. All borehole drilling was completed by Ponthil, using a CME-75 truck-mounted drill rig, on various days between December 2 and 23, 2020.

All boreholes were drilled under the supervision of WSP. Wood attended the drilling during drilling of the boreholes indicated in the following table. It is noted that many of the boreholes extended well beyond these depths for the purposes of the Geotechnical Investigation, however, Wood was not present for this additional drilling.

Borehole ID	Address of APEC/PCA	Contaminants of Potential Concern	Monitoring Well Install	Maximum Depth of Sampling
BH-02	APEC-8: Liquid Fuel AST Located at 7770 Canadian Drive	Metals including hydrides EC, SAR, pH PHCs and BTEX	-	4 m
BH-03	APEC-7: Diesel Fuel AST Located at 8108 Heartland Forest Road	Metals including hydrides EC, SAR, pH PHCs and VOCs	Yes (BH-P02)	4/5 m
BH-04, BH-05 and BH-06	Montrose Road – General Site Characterization	Metals Including hydrides EC, SAR, pH	-	3 m
BH-07	APEC-4: Industrial Land Uses, Spills, PCB Storage, ASTs (9127 Montrose Road)	Metals Including hydrides EC, SAR, pH PHCs and VOCs PCBs PAHs	-	4 m
BH-07	APEC-5: Railway crossing Montrose Road, between Grassy Brook Road and 8891 Montrose Road			
BH-07 and BH-09	APEC-3: Spill of Diesel Fuel (Montrose Road between Reixinger Road and the Welland River)	PHCs and BTEX	-	4 m
BH-08	North Side of Reixinger Road – Auto Wrecking Yard	Metals including hydrides EC, SAR, pH PHCs and VOCs	-	4 m

Borehole ID	Address of APEC/PCA	Contaminants of Potential Concern	Monitoring Well Install	Maximum Depth of Sampling
BH-P01	APEC-1 (diesel AST) and APEC-2 (transformer) at 7606 Oakwood Drive (High Lift Pump Station)	Metals Including hydrides EC, SAR, pH PHCs and BTEX PCBs	Yes	4 m
BH-P03	APEC-6: chemical and pharmaceutical research company at 8485 Montrose Road	Metals Including hydrides EC, SAR, pH	-	5 m

Split spoon samples (0.6 m in length) were obtained at 0.8 m intervals during borehole advancement through at least the upper 6 m of each borehole. Soil cuttings generated during the investigation were left on-Site in the vicinity of each borehole or were placed in drums, at the direction of WSP.

The locations of the boreholes are shown on **Figure 1**.

Details of the borehole drilling are provided in the borehole logs in **Appendix A** (WSP logs for BH-02 to BH-09, and Wood logs for BH-P01 to BH-P03).

### 2.1.2 Field Screening Measurements

All soil samples were screened in the field for gross evidence of negative environmental impact including staining and odours. Soil sample headspace screening was also performed for the samples collected during drilling, to facilitate sample selections for laboratory analysis and to provide an assessment of the vertical contaminant distributions at each location. The duplicate soil sample fractions were screened for combustible organic vapour (COV) and total organic vapour (TOV) concentrations using the sample headspace method. COV and TOV concentrations were measured using an RKI EAGLE 2™ combustible vapour analyzer equipped with dual sensors and calibrated to known hexane and isobutylene standards and operated in methane elimination mode. The RKI EAGLE 2™ can detect 0-11,000 parts per million (ppm) and 0-100 % Lower Explosive

Limit (LEL) with an accuracy of  $\pm 5\%$  and the calibration standard is Hexane. The equipment is calibrated every day prior to the commencement of fieldwork.

The TOV/COV screening measures the cumulative organic/combustible vapour present within sample headspace. TOV/COV results are semi-quantitative at best and are generally only used for relative sample comparison purposes when selecting samples from individual boreholes for laboratory analysis.

The soil vapour concentrations are included in the borehole logs in Section 3.2.2.

### 2.1.3 Sample Logging and Handling

The soil samples retrieved during the field investigations were examined, classified, and logged per soil type, moisture content, colour, consistency, and presence of visual and/or olfactory indicators of negative impact.

All soil samples were collected in accordance with strict environmental sampling protocols to minimize loss of volatile organics and to ensure reliable and representative results. All soil sampling equipment was thoroughly decontaminated between soil sample locations to prevent potential cross-contamination. Decontamination activities included:

- Physical removal of any adhered debris;
- Wash/scrub in “Alconox” soap solution;
- Distilled water rinse; and
- Methanol rinse/air drying.

Soil samples collected during the drilling investigation were split into duplicate fractions upon recovery. The primary sample fractions were placed into glass jars with Teflon-lined lids supplied by the laboratory (no preservative). At sample locations which were potentially to be submitted for analysis for PHC F1 and BTEX, an Eze-Core Soil Sampler was used to obtain a 5 gram sample, which was then transferred into a 40 millilitre (mL) vial preserved with methanol. The samplers and vials were also provided by the laboratory. Each sample was labeled using a unique identifier (borehole of origin and depth interval below grade). All samples were subsequently stored in coolers on ice for future potential laboratory analysis.

The duplicate sample fractions were placed in resealable plastic sample bags for the purposes of field screening of TOV/COV.

All laboratory chemical analyses were conducted by Paracel Laboratories Limited (Paracel), an ISO 17025-accredited laboratory located in Ottawa, Ontario.

The criteria for the selection of soil samples for laboratory analysis were based on visual/olfactory observations and TOV/COV readings. The soil samples were submitted for pH determination, and analysis of metals including hydrides, inorganics, including pH, EC and SAR, PHCs, VOCs/BTEX, PAHs and PCBs. The specific borehole/monitoring well locations and depth intervals of samples selected for analysis and the parameters they were submitted for are included in the Tables appendix at the end of this report.

## 2.2 Monitoring Well Purging and Sampling

Two ground water monitoring wells were installed for environmental sampling purposes, at borehole locations BH-P01 and BH-P02. The locations selected for these monitoring wells represented the areas on the Site with the highest potential for ground water impact.

The monitoring wells were constructed using 40-millimetre (mm) diameter, schedule 40, flush-joint threaded PVC monitoring well supplies. The wells were completed with a 3.05 m length of #10 mill slotted intake screen. The top of the intake screen was then extended just below the ground surface using solid riser pipe. A silica sand filter pack was placed between the intake screen and the wall of the borehole. The filter pack was extended approximately 0.3 m above the top of the well screen. A bentonite seal was placed above the sand pack to surface. The wells were completed with flush mounted casings. Details of the monitoring well construction are included in the borehole logs in **Appendix A**.

Ground water monitoring wells BH-P01 and BH-P02 were instrumented with dedicated Waterra™ foot valve inertial pumps fitted with polyethylene tubing to facilitate well development. The newly installed wells were developed on January 7, 2021 by purging three well volumes using dedicated instrumentation (i.e., foot valve and tubing). The monitoring wells were subsequently purged using low flow sampling techniques on January 13, 2021 until various parameters (including pH, conductivity and temperature) had reached stabilization criteria. During development and purging, an oil/water interface meter was used to measure potential accumulations of Light Non-Aqueous Phase Liquids (LNAPL) or Dense Non-Aqueous Phase Liquids (DNAPL), and ground water levels in the well. Both monitoring wells were purged and monitored again on May 13, 2022.

Following monitoring and purging activities, Wood collected a ground water sample from BH-P01 and BH-P02 into labelled, laboratory-provided containers using the low flow

sampling system with dedicated instrumentation. The samples were stored in a cooler on ice after collection and during transportation to the laboratory where they were delivered under continuous Chain of Custody documentation. The sampling methodology including jar, bottle and preservative requirements followed the Analytical Protocol.

The representative ground water samples collected during the investigation were submitted for laboratory analysis of metals, PHCs and/or VOCs. All laboratory chemical analyses were conducted by Paracel.

### 3.0 RESULTS OF THE FIELD INVESTIGATION

#### 3.1 Site Geology

The subsurface conditions encountered at the Site are described in the borehole logs provided in **Appendix A**.

The surficial conditions encountered at the Site were variable between borehole locations. In general, the surficial conditions encountered at the Site during the borehole drilling program consisted of layer of asphalt and granular fill (or topsoil in unpaved areas) over native, undisturbed silty clay. Silty clay fill was also present underlying the granular fill in some boreholes. Various additional layers were encountered beneath the silty clay, however, Wood was not on-Site for deeper drilling. Bedrock was encountered at depths ranging from 15.2 to 29.3 mbgs. Refer to the WSP Geotechnical Investigation for more detailed information on the overburden and bedrock drilling.

No deleterious fill materials were observed during the drilling program.

#### 3.2 Field Measurements

##### 3.2.1 Staining and Odours

Visual and/or olfactory evidence of petroleum hydrocarbon impact (petroleum-like odours and/or black staining) or other chemical-type impacts were not observed in any of the boreholes.

##### 3.2.2 COV and TOV Concentrations

COV and TOV concentration headspace measurements recorded in the soil samples collected from the boreholes are summarized in the following table.

BH ID	BH-02		BH-03		BH-04		BH-05		BH-06		BH-07		BH-08		BH-09		BH-P01		BH-P03	
	C	T	C	T	C	T	C	T	C	T	C	T	C	T	C	T	C	T	C	T
	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O	O
	V	V	V	V	V	V	V	V	V	V	V	V	V	V	V	V	V	V	V	V
Sample Interval																				
SS1	-	-	25	1	-	-	-	-	-	-	-	-	0	1	-	-	0	1	0	1
SS2	-	-	0	0	60	0	0	2	-	-	-	-	-	-	-	-	0	1	0	0
SS3	-	-	60	0	115	0	0	2	0	0	55	0	0	0	-	-	0	1	0	0
SS4	-	-	35	0	55	0	0	0	15	0	0	0	0	0	-	-	0	0	0	0
SS5	-	-	60	1	100	0	0	0	0	0	0	0	-	-	-	-	0	0	0	0
SS6	-	-	-	-	-	-	-	-	-	-	0	0	-	-	-	-	0	0	0	0
SS7	-	-	20	0	-	-	-	-	-	-	-	-	-	-	80	0	0	0	0	0
SS8	-	-	0	1	-	-	-	-	30	0	-	-	-	-	-	-	0	0	-	-

**Notes:** All readings in parts per million (ppm). “-“ means vapour sample not obtained from this sample interval.

COV concentration headspace measurements recorded in the soil samples collected from the boreholes ranged from non-detectable to 115 parts per million (ppm). TOV concentration headspace measurements recorded in the soil samples collected from the boreholes ranged from non-detectable to 2 ppm. The COV and TOV concentrations headspace measurements are summarized in the borehole logs in **Appendix A**.

It is Wood’s opinion that the results of the screening program suggest a low potential for the presence of combustible soil headspace vapour levels in the soil/fill samples.

Various samples were submitted for laboratory analysis of PHCs and VOCs or BTEX to confirm and quantify these results (refer to **Section 5.1**).

### 3.2.3 LNAPL and DNAPL

LNAPL or DNAPL were not observed during the purging and sampling of the monitoring wells.

#### 4.0 REGULATORY FRAMEWORK

The SCS applicable to the Site have been evaluated based on the following rationale:

- The Site consists of a roadway, which is classified as community property use;
- The results of the grain size test on sample BH-05-5-C indicated approximately 91.4% of the native silty clay consisted of particles less than 75 micrometres ( $\mu\text{m}$ ) in diameter (**Appendix B**). Therefore, the soil at the Site was classified as a medium and fine textured soil (i.e., contains 50% or more by mass of particles that are smaller than 75  $\mu\text{m}$  in mean diameter(*O. Reg. 153/04, s.42 (2)*));
- Municipal water service is not available in the general area of the Site, and therefore, the potable ground water condition applies. In addition, as per the 2021 Phase I ESA, a review of the MECP Well Records and ERIS report indicated that there were records for both domestic drinking water wells and monitoring wells within the vicinity of each Section of the Site.
- In accordance with *O. Reg. 153/04*, the Site includes land that is within 30 m of a “water body”, including both the Welland River, adjacent to the north of the Site and Grassy Brook Creek, adjacent to the northwest of the Site;
- Based on the boreholes drilled for the Investigation, the depth to bedrock is greater than 2 m; and
- The Site is classified as an *Environmentally Sensitive Area* under *O. Reg. 153/04* as amended, as:
  - The Site includes land and is within 30 m of land that is classified as an *Area of Natural Significance* as defined by *O. Reg. 153/04* as amended, including the following:
    - Portions of the Welland River West Wetland Complex, a Provincially Significant Wetland (PSW), including land adjacent to the Welland River;
    - Lower Grassy Brook Wetland Complex, a PSW, located surrounding Grassy Brook Creek;

- Lyon's Creek Wetland Complex, a PSW, located at the south end of the Site, on the south side of Reixinger Road;
  - Warran Creek Wetland Complex, a PSW, located adjacent to the Site to the south of Brown Road, west of Montrose Road;
  - The PSWs are also designated as Environmental Protection Area by the City of Niagara Falls (City) and RMON; and
- Eleven soil samples were submitted for pH determination. All samples had a pH between 7.4 and 7.7. The reported soil pH for all samples was within the range 5.0 to 9.0 units for surface soil (surface to 1.5 mbgs) and 5.0 to 11.0 units for subsurface soil (below 1.5 mbgs) (**Table 1**).

Due to the presence of *Areas of Natural Significance (ANSI)* both on-Site and off-Site (within 30 m of the Site boundaries), the Site is classified as an *Environmentally Sensitive Area*, and the SCS currently applicable to the Site are the Table 1 Background Site Condition Standards (Table 1 SCS), for residential/parkland/institutional/industrial/commercial/community property use.

However, not all of the Site would be considered an *Environmentally Sensitive Area*. Any lands greater than 30 m from a water body or *ANSI* could be compared to less stringent standards. Therefore, Wood has also compared the results to the Table 2 Full Depth Generic Site Condition Standards in a Potable Ground Water Condition, for industrial/commercial/ community property use and medium and fine textured soils (the Table 2 SCS).

## 5.0 LABORATORY ANALYSES

### 5.1 Soil Sample Analyses

Twenty-three soil samples from the boreholes were submitted for analysis of general inorganics, metals, PHCs, VOCs/BTEX, PAHs and/or PCBs. The results of the analyses, and the respective Table 1 SCS and Table 2 SCS, are presented in detail in **Tables 1 through 3** (appended to this report), and summarized in the following table. Exceedances of the Table 1 SCS for conductivity and/or SAR were identified at six borehole locations, including BH02, BH-04, BH-05, BH-07, BHP-01 and BH-P03. There were no exceedances of the Table 1 SCS for metals, PHCs, VOCs/BTEX, PAHs or PCBs. Three borehole locations also exceeded the Table 2 SCS for conductivity. No other exceedances of the Table 2 SCS were identified.

Sample Name	Sample Depth (mbgs)	Sample Analyses					Exceedances Identified *	
		Ino rg,	Met als	PHCs VOCs / BTEX	PAHs	P C B	Table 1 SCS	Table 2 SCS
BH02-2-C	0.8-1.4	✓	✓	✓			SAR – 2.49 (2.4)	-
BH03-3-C	1.5-2.1	✓	✓				-	-
BH03-6-D & DUP AB	3.3			✓			-	-
BH04-3-C	1.5-2.1	✓	✓				Conductivity – 1,360 (700)	-
BH04-5-D	3.4			✓			-	-
BH05-2-D	1.0	✓					Conductivity – 2,270 (700) SAR – 6.9 (2.4)	Conductivity – 2,270 (1,400)
BH05-3-C	1.5-2.1		✓				-	-
BH05-4-D	2.5			✓			-	-

Sample Name	Sample Depth (mbgs)	Sample Analyses					Exceedances Identified *	
		Ino rg,	Met als	PHCs VOCs / BTEX	PAHs	P C B	Table 1 SCS	Table 2 SCS
BH06-3-D	1.7			✓			-	-
BH06-4-C	2.3-2.9	pH	✓				-	-
BH07-2-D	0.8	✓	✓				Conductivity – 1,690 (700) SAR – 5.09 (2.4)-	Conductivity – 1,690 (1,400)
BH07-3-D	1.8				✓	✓	-	-
BH07-4-D	2.6			✓			-	-
BH07-6-D	4.1	pH					-	-
BH08-1-C	0-0.6	✓	✓				-	-
BH08-2-D	1.1			✓			-	-
BH09-6-C	3.8-4.4	pH	✓				-	-
BH09-7-D	4.9			✓			-	-
BH-P01-1-C	0.4-0.6	✓				✓	Conductivity – 1,650 (700)	Conductivity – 1,650 (700)
BH-P01-2-D	1.0			✓			-	-
BH-P01-3-C	1.5-2.1		✓				-	-
BH-P03-1-C	0-0.6	✓					SAR – 4.34 (2.4)	-
BH-P03-4-C & DUP AG	2.3-2.9	pH	✓				-	-
Total # Samples		12	10	9	1	2		

Notes: All units are in micrograms per gram (µg/g) except conductivity, in microSiemens per centimetre (µs/cm), and SAR (unitless). \* Where an exceedance is shown, it is shown in this format: “parameter – result (Table x SCS)”.

The elevated conductivity and SAR in the soil is attributed to the use of road salt, applied to the road surfaces for the safety of vehicular traffic under conditions of snow or ice or both. As such, in accordance with Ontario Regulation 153/04, as amended, the exceedances for EC and SAR are not considered exceedances if they remain on the Site. Therefore, there were no exceedances identified in any of the soil samples from the four boreholes drilled for this Investigation.

The laboratory certificates of analysis are included in **Appendix B**.

## 5.2 Ground Water Sample Analyses

Ground water samples collected from two monitoring wells were submitted for analysis of metals, PHCs and VOCs. The results of the analyses, and the respective Table 1 SCS and Table 2 SCS, are presented in detail in **Tables 4 and 5** (appended to this report) and are summarized in the following table. Exceedances of the Table 1 SCS for metals were identified at both monitoring wells, while only BH-P01 exceeded the Table 2 SCS (for uranium). There were no exceedances of the Table 1 or Table 2 SCS for PHCs or VOCs.

The laboratory certificates of analysis are included in **Appendix B**.

Sample Name (Date)	Screened Interval (mbgs)	Sample Analyses		Exceedances Identified *	
		Met als	PHC/ VOC	Table 1 SCS	Table 2 SCS
BH-P01 (13-Jan-2021)	4.55-7.6	✓	✓	Uranium – 24.6 (8.9)	Uranium – 24.6 (20)
BH-P02 & DUP WA (13-Jan-2021)	4.55-7.6	✓	✓	Silver – 0.4 (0.3)	-
BH-P01 & Dup-GW (13-May-2022)	4.55-7.6	✓	X	Uranium – 24.2 & 22.9 (8.9)	Uranium – 24.6 & 22.9 (20)

Sample Name (Date)	Screened Interval (mbgs)	Sample Analyses		Exceedances Identified *	
		Metals	PHC/VOC	Table 1 SCS	Table 2 SCS
BH-P02 (13-May-2022)	4.55-7.6	✓	X	-	-
<b>Total # Samples</b>		4	2		
Notes: All units are in micrograms per Litre (µg/L). * Where an exceedance is shown, it is shown in this format: “parameter – result (Table x SCS)”.					

### 5.3 Quality Assurance Program

#### 5.3.1 Accreditation

The analytical laboratory employed to perform the laboratory analyses (Paracel) is accredited by the Standards Council of Canada/Canadian Association for Laboratory Accreditation Standards in accordance with ISO/IEC 17025:2005 – “*General Requirements for the Competence of Testing and Calibration Laboratories*” for the tested parameters and have met the standards for proficiency testing developed by the Standards Council of Canada for parameters set out in the Soil, Ground Water and Sediment Standards.

#### 5.3.2 Data Validation

##### Field QA/QC Program

The field QA/QC program consisted of analyzing blind field duplicate soil and ground water samples including:

- DUP AG, a field duplicate of soil sample BH-P03-4-C, for metals;
- Dup AB, a field duplicate of soil sample BH-03-6-D, PHCs and VOCs;
- DUP WA, a field duplicate of ground water sample BH-P02, for metals, PHCs and VOCs; and

- Dup-GW, a field duplicate of ground water sample BH-P01, for metals.

Duplicate samples are analyzed to assess the precision of the field sampling and laboratory analytical processes. To accurately calculate a statistically valid relative percent difference (RPD) for the duplicate sample, the concentration of the analytes found in both the original and duplicate sample must be greater than five (5) times the MDL. An assessment of the RPDs for the duplicate samples was completed (**Tables 1, 2, 4 and 5**). The RPDs were either not calculable as both values were not greater than five times the MDL or were below the RPD limits.

It is noted that the RPD values in the Analytical Protocol are for duplicate samples collected at the laboratory and are used for comparison to the RPDs calculated for field duplicates.

During the second sampling event on May 13, 2022, a field blank sample was submitted for analysis of metals. Field blanks are samples of laboratory provided reverse osmosis deionized (RODI) water, which is poured into a set of sample bottles at the same time and in the same general area as the samples are collected. The field blank is used to determine if there is presence of contamination as a result of field handling. The field blank was non-detectable for all parameters analyzed, indicating that the field activities did not bias the reported results.

A trip blank was also submitted for analysis of metals during the second sampling event. A trip blank is a sample of RODI water prepared and filled into the relevant sample bottles by the laboratory. The sample is sent with the bottle shipment, taken out to the field and then shipped back with the collected samples for analysis (not opened at any time by field staff). All parameters were found to be non-detectable in the trip blank.

All fieldwork was conducted in accordance with the applicable sampling guidelines, which included dedicated sampling equipment, disposable gloves, and sample preservation, where required.

#### Laboratory QA/QC Program

All sample analyses were performed within the required sample/extract hold times.

The analytical results reported for all laboratory duplicate, blank and spike samples were acceptable, with the exceptions noted on the laboratory certificates of analysis in

**Appendix B.** The analyses were accepted by the laboratory based on other QC in the batch.

In general, no information provided in the QA/QC results for soil and ground water samples would impact the findings of the investigation.

## 6.0 CONCLUSIONS

The Phase II ESA was completed to address APECs identified during the Phase I ESA, including:

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Boreholes Addressing this APEC	Contaminants of Potential Concern	Media Potentially Impacted
APEC-1: Presence of Diesel AST	7606 Oakwood Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	BH-P01 (soil and ground water)	pH, EC, SAR, Metals, As, Sb, Se, PHCs, and BTEX	Soil and Ground Water
APEC-2: Presence of Transformer	7606 Oakwood Drive	PCA # 55 – Transformer Manufacturing, Processing and Use	BH-P01 (soil and ground water)	PHCs, BTEX, and PCBs	Soil and Ground Water
APEC-3: Spill of Diesel Fuel	Montrose Road between Reixinger Road and the Welland River	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	BH-07 and BH-09	PHCs and BTEX	Ground Water

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Boreholes Addressing this APEC	Contaminants of Potential Concern	Media Potentially Impacted
APEC-4: Industrial Land Uses, Spills, PCB Storage, ASTs	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks PCA #33 – Metal Treatment, Coating, Plating and Finishing PCA #34 – Metal Fabrication PCA #39 – Paints Manufacturing, Processing and Bulk Storage PCA #57 – Vehicles and Associated Parts Manufacturing	BH-07	EC, SAR, pH, Metals, As, Sb, Se, PHCs, VOCs, PCBs, and PAHs	Ground Water
APEC-5: Railway	Montrose Road between Grassy Brook Road and 8891 Montrose Road	PCA #46 – Rail Yards, Tracks and Spurs	BH-07	Metals including As, Sb, Se, PHCs, VOCs, and PAHs	Soil

Area of Potential Environmental Concern (APEC)	Location of APEC on Site	Potentially Contaminating Activity*	Boreholes Addressing this APEC	Contaminants of Potential Concern	Media Potentially Impacted
APEC-6: Chemical and Pharmaceutical Research Company at 8485 Montrose Road	Montrose Road Between Blackburn Parkway to 100 m South of Blackburn Parkway	PCA #8 – Chemical Manufacturing, Processing and Bulk Storage PCA #42 – Pharmaceutical Manufacturing and Processing	BH-P03	pH, EC, SAR, Metals, As, Sb, Se, and VOCs	Ground Water
APEC-7: Diesel Fuel AST Located at 8108 Heartland Forest Road	Brown Road Between Heartland Forest Road and 50 m East of Heartland Forest Road	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	BH-03 (soil) and BH-P02 (ground water)	PHCs and VOCs	Ground Water
APEC-8: Liquid Fuel AST Located at 7770 Canadian Drive	Montrose Road Between Canadian Drive and 50 m South of Canadian Drive	PCA #28 – Gasoline and Associated Products Stored in Fixed Tanks	BH-02	PHCs and VOCs	Ground Water

\*Potentially Contaminating Activity (PCA) described specifically for the Site with reference to the applicable item number in the Table of Potentially Contaminating Activities provided in Schedule D of *O. Reg. 153/04* as amended, where applicable.

PHCs – Petroleum Hydrocarbons

BTEX – Benzene, Toluene, Ethylbenzene, Xylenes

PCBs – Polychlorinated Biphenyls

PAHs – Polycyclic Aromatic Hydrocarbons

VOCs – Volatile Organic Compounds

EC – Electrical Conductivity

SAR – Sodium Adsorption Ratio

As – Arsenic

Sb – Antimony

Se - Selenium

The Phase II ESA included the drilling of 10 boreholes, and the installation of two ground water monitoring wells (with associated soil and ground water sampling and analytical programs) in an effort to determine Site characteristics and COPCs including, including, metals, including hydrides, inorganics, PHCs, VOCs/BTEX, PAHs and PCBs.

The borehole drilling for this project was coordinated with a Geotechnical Investigation underway concurrently for the same project. The Client retained WSP for the Geotechnical Investigation, and the drilling subcontractor was retained by WSP. All boreholes were drilled under the supervision of WSP. Wood attended the drilling during drilling of the boreholes indicated in the table above. It is noted that many of the boreholes extended well beyond the depth required for environmental sampling, and Wood was not present for this additional drilling.

Due to the presence of ANSI both on-Site and off-Site (within 30 m of the Site boundaries), the Site is classified as an *Environmentally Sensitive Area*, and the SCS currently applicable to the Site are the Table 1 Background Site Condition Standards (Table 1 SCS), for residential/parkland/institutional/industrial/commercial/community property use.

However, not all of the Site would be considered *Environmentally Sensitive Area*. Any lands greater than 30 m from a water body or ANSI could be compared to less stringent standards. Therefore, Wood has also compared the results to the Table 2 Full Depth Generic Site Condition Standards in a Potable Ground Water Condition, for industrial/commercial/ community property use and medium and fine textured soils (the Table 2 SCS).

All samples with Table 1 or Table 2 SCS exceedances are summarized in the following table:

Soil Sample Location	Sample Depth (mbgs)	Exceedances of Table 1 SCS	Exceedances of Table 2 SCS
<b>Borehole Soil Samples</b>			
BH02-2-C	0.8-1.4	SAR – 2.49 (2.4)	-
BH04-3-C	1.5-2.1	Conductivity – 1,360 (700)	-

Soil Sample Location	Sample Depth (mbgs)	Exceedances of Table 1 SCS	Exceedances of Table 2 SCS
BH05-2-D	1.0	Conductivity – 2,270 (700) SAR – 6.9 (2.4)	Conductivity – 2,270 (1,400)
BH07-2-D	0.8	Conductivity – 1,690 (700) SAR – 5.09 (2.4)-	Conductivity – 1,690 (1,400)
BH-P01-1-C	0.4-0.6	Conductivity – 1,650 (700)	Conductivity – 1,650 (700)
BH-P03-1-C	0-0.6	SAR – 4.34 (2.4)	-
Ground Water Sample Location (Date)	Screened Interval (mbgs)	Exceedances of Table 1 SCS	Exceedances of Table 2 SCS
BH-P01 (13-Jan-2021)	4.55-7.6	Uranium – 24.6 (8.9)	Uranium – 24.6 (20)
BH-P02 & DUP WA (13-Jan-2021)	4.55-7.6	Silver – 0.4 (0.3)	-
BH-P01 & Dup-GW (13-May-2022)	4.55-7.6	Uranium – 24.2 & 22.9 (8.9)	Uranium – 24.6 & 22.9 (20)
BH-P02 (13-May-2022)	4.55-7.6	-	-

Notes:

All units for soil samples are in micrograms per gram (µg/g) except conductivity, in microSiemens per centimetre (µs/cm) and SAR (unitless).

All units for ground water samples are in micrograms per Litre (µg/L).

\* Where an exceedance is shown, it is shown in this format: “parameter – detected concentration in sample (Table X SCS)”.

**Borehole Soil Samples**

The elevated conductivity and SAR in the soil is attributed to the use of road salt, applied to the road surfaces for the safety of vehicular traffic under conditions of snow or ice or both. As such, in accordance with Ontario Regulation 153/04, as amended, the exceedances for EC and SAR are not considered exceedances if they remain on the Site. Therefore, there were no exceedances identified in any of the soil samples from the boreholes drilled for this Investigation.

**Ground Water Samples**

The ground water sample from monitoring well BH-P01 exceeded the Table 1 SCS and Table 2 SCS for uranium, and the sample from BH-P02 exceeded the Table 1 SCS for silver during the initial ground water sampling program in January 2021. To confirm these exceedances, Wood re-sampled both of the ground water monitoring wells in May 2022. The results of the re-sampling event showed that the ground water in BH-P01 exceeded the Table 1 and 2 SCS for uranium. The ground water in BH-P02 was not found to have any exceedances during the re-sampling event. Therefore, the initial silver exceedance in BH-P02 is considered to be an anomaly, and the uranium exceedance in BH-P01 is most likely a naturally occurring level. PHCs and VOCs were not detected in either well.

## 7.0 RECOMMENDATIONS

Based on the contaminants of concern, Wood does not see the exceedances to be a potential constraint or impediment for construction on these lands. However, the following considerations should be taken prior to and during construction:

- Any excess soil generated during construction in the sewer alignment must follow *Ontario Regulation 406/19 (O. Reg. 406/19): On-Site and Excess Soil Management*. The Phase I ESA completed prior to this Phase II ESA may be used as the Assessment of Past Uses report in support of excess soil management for the Site. However, since the date of the Phase I ESA is greater than 18 months old, it would need to be updated to meet the standards of the regulation. Additionally, some samples collected and analyzed during this Phase II ESA may be used towards the total number of samples analyzed that are required by *O. Reg. 406/19* based on the estimated volume of excess soil that will be generated. However, additional sample collection will be required to meet the sampling frequency required by *O. Reg. 406/19*. While the elevated levels of EC and SAR in soil are not considered to be exceedances in *O. Reg. 153/04* at the Site due to the use of road salt for safety purposes, they may be considered exceedances on other properties. This should be taken into consideration when planning for the potential removal of soil during construction activities following *O. Reg. 406/19*;
- A due diligence risk assessment could be completed to assess any risks associated with soil and/or ground water exceedances of the Table 1 or 2 SCS, as applicable. The risk assessment would also outline any mitigation measures to control the identified risks. Examples of mitigation measures may include: soil remediation (e.g., soil removal) and/or reducing ground water generated during construction; and
- It is recommended to undertake dewatering activities during construction when the ground water aquifer is encountered. Dewatering will reduce the chance that ground water exceedances are spread across the Site. Wood also recommends that the ground water in the area of the proposed sewer alignment be sampled for Niagara Sewer Use By-Law parameters. If the ground water does not exceed any of the Niagara Sewer Use By-Law parameters, it may be discharged to the regional

stormwater or sanitary sewer system during construction. It is noted that there is no value for uranium in the Niagara Sewer Use By-Law.

Should the ground water monitoring wells no longer be required, they must be maintained or abandoned in accordance with the requirements of Section 21(3) of Ontario Regulation 903 – Wells which states *“the well owner shall immediately abandon the well if it is not being used or maintained for future use as a well”*.

## 8.0 LIMITATIONS

This report was prepared for the exclusive use of Regional Municipality of Niagara and is intended to provide a Phase II Environmental Site Assessment of the property referred to as the future Sewer Alignment & Construction Shafts for the future Wastewater Treatment Plant Site in Niagara Falls, Ontario, including Reixinger Road, from 6811 Reixinger Road to Montrose Road, Montrose Road, from Reixinger Road to south of Canadian Drive, Brown Road, from Montrose Road to Heartland Forest Road and a section of land extending in a straight-line west from 7606 Oakwood Drive (South Side High Lift Sewage Pumping Station; SSHL SPS) to south of Canadian Drive. Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of the third party. Should additional parties require reliance on this report, written authorization from Wood will be required. With respect to third parties, Wood has no liability or responsibility for losses of any kind whatsoever, including direct or consequential financial effects on transactions or property values, or requirements for follow-up actions and costs.

The investigation undertaken by Wood with respect to this report and any conclusions or recommendations made in this report reflect Wood's judgment based on the Site conditions observed at the time of the Site inspections set out in this report and on information available at the time of preparation of this report. This report has been prepared for specific application to this Site and it is based, in part, upon visual observation of the Site, subsurface investigation at discrete locations and depths, and specific analysis of specific chemical parameters and materials during a specific time interval, all as described in this report. Unless otherwise stated, the findings cannot be extended to previous or future Site conditions, portions of the Site, which were unavailable for direct investigation, subsurface locations, which were not investigated directly, or chemical parameters, materials or analysis which were not addressed. Wood has used its professional judgment in analysing this information and formulating these conclusions.

Wood makes no other representations whatsoever, including those concerning the legal significance of its findings, or as to other legal matters touched on in this report, including, but not limited to, ownership of any property, or the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes are subject to interpretation and change. Such interpretations and regulatory changes should be reviewed with legal counsel.

This Report is also subject to the further Standard Limitations contained in **Appendix C**.

## 9.0 CLOSURE

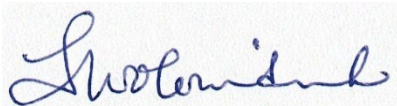

We trust that the information presented in this report meets your current requirements. Should you have any questions, or concerns, please do not hesitate to contact the undersigned.

Yours truly,

**Wood Environment & Infrastructure Solutions,

## TABLES

### Table Notes and Abbreviations

Site Condition Standards - Soil and Ground Water	
Table 1 SCS	Table 1: Background Site Condition Standards; established in "Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act", Ontario Ministry of the Environment (MOE), 15 April 2011. Table 1 SCS for Residential/Parkland/Institutional/ Industrial/Commercial/Community (R/P/I/I/C/C) Property Use and medium and fine textured soils utilized.
Table 2 SCS	Table 2: Full Depth Generic Site Condition Standards in a Potable Ground Water Condition; established in "Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act", Ontario Ministry of the Environment (MOE), 15 April 2011. Table 2 SCS for Industrial/Commercial/Community Property Use and medium and fine textured soils utilized.
<b>BOLD</b>	Result exceeds the Table 1 SCS.
<b>BOLD</b>	Result exceeds the Table 1 and Table 2 SCS.
NV	No value derived.
*	To apply the generic standards (Table 2 SCS), pH for surface soil must be between 5-9 and pH for subsurface soil must be between 5 to 11.
Units	
µg/g	micrograms per gram, parts per million.
µS/cm	microSiemens per centimetre.
µg/L	micrograms per Litre, parts per billion.
Detection Limits	
MDL	Method Detection Limit
Results	
-	Parameter not analyzed.
<	Sample result less than the MDL.
Quality Assurance/Quality Control (QA/QC)	
Duplicate Average	Average of results of sample and it's field duplicate; where parameter <MDL, MDL used to calculate average. Note: the duplicate average must exceed the SCS for there to be an exceedance.
RPD	Relative Percent Difference
NC	RPD not calculable as both values are not greater than 5x the MDL.
<b>RPD</b>	RPD outside of the sample duplicate values as outlined in the 2011 Analytical Protocol: <u>Soil:</u> -0.3 pH units; -10% for EC; -30% for Metals, PHCs; -35% for Cyanide (free); -40% for PAHs; and -50% for VOCs. <u>Ground Water:</u> -20% for Metals; and
Parameter Groups	
General Inorganics	includes pH, Sodium Adsorption Ratio (SAR) and Conductivity
Metals	includes hydride forming metals (antimony, arsenic and selenium)
PHCs	Petroleum Hydrocarbons in the F1 to F4 ranges
VOCs	Volatile Organic Compounds
PAHs	Polycyclic Aromatic Hydrocarbons
PCBs	Polychlorinated Biphenyls
mbgs	metres below ground surface
mASL	metres above sea level
	Elevated MDL (refer to notes on relevant table), detection limit shown if result <MDL.
	MDL higher than relevant standard.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

**Criteria:**

Certificate of Analysis

Report Date: 08-Dec-2020

Client: Wood Environment & Infrastructure (Thorold)

Order Date: 3-Dec-2020

Client PO:

Project Description: OESAM2008/2000

**Qualifier Notes:**

None

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Certificate of Analysis

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

**Criteria:**

Client ID	Analyte	MDL / Units	Result	Reg 153/04 (2011)-Table 1 Residential/Industrial
BH-05-2-D	SAR	0.01 N/A	6.90	<b>2.4</b> N/A
BH-05-2-D	Conductivity	5 uS/cm	2270	<b>0.57</b> mS/cm

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

### Regulatory Comparison:

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, (), applies to medium and fine textured soils.

### Criteria:

**Qualifier Notes:**

None

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

Client: Wood Environment & Infrastructure (Thorold)

Order Date: 10-Dec-2020

Client PO:

Project Description: OESAM2008/2000

**Qualifier Notes:**

QC Qualifiers :

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

**Criteria:**

Project Description: OESAM2008/2000

**Qualifier Notes:**

None

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

Certificate of Analysis

Report Date: 18-Dec-2020

Client: Wood Environment & Infrastructure (Thorold)

Order Date: 14-Dec-2020

Client PO:

Project Description: OESAM2008/2000

**Qualifier Notes:**

None

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

### Regulatory Comparison:

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, (), applies to medium and fine textured soils.

### Criteria:

Client ID	Analyte	MDL / Units	Result	Reg 153/04 (2011)-Table 1 Residential/Industrial
BH-02-2-C	SAR	0.01 N/A	2.49	2.4 N/A

Client PO:

Project Description: **OESAM2008/2000**

**Qualifier Notes:**

**Login Qualifiers :**

Sample - F1/BTEX/VOCs (soil) not submitted according to Reg. 153/04, Amended 2011 - not field preserved

*Applies to samples: BH-02-2-C*

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

***CCME PHC additional information:***

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

### Regulatory Comparison:

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

Certificate of Analysis

Report Date: 24-Dec-2020

Client: Wood Environment & Infrastructure (Thorold)

Order Date: 18-Dec-2020

Client PO:

Project Description: OESAM2008.2000

**Qualifier Notes:**

None

**Sample Data Revisions**

None

**Work Order Revisions / Comments:**

None

**Other Report Notes:**

n/a: not applicable

ND: Not Detected

MDL: Method Detection Limit

Source Result: Data used as source for matrix and duplicate samples

%REC: Percent recovery.

RPD: Relative percent difference.

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, ( ), applies to medium and fine textured soils.

**Criteria:**

Client ID	Analyte	MDL / Units	Result	Reg 153/04 (2011)-Table 1 Residential/Industrial
BH-07-2-D	SAR	0.01 N/A	5.09	<b>2.4</b> N/A
BH-07-2-D	Conductivity	5 uS/cm	1690	<b>0.57</b> mS/cm

NC: Not Calculated

Soil/Solid results are reported on a dry weight basis unless otherwise indicated

Where %Solids is reported, moisture loss includes the loss of volatile hydrocarbons.

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

## Certificate of Analysis

### Wood Environment & Infrastructure (Thorold)

110 James Street Suite 301  
St. Catharines, ON L2R 7E8  
Attn: Kelly Patterson

Client PO:  
Project: OESAM2008/2000  
Custody: 56363

Report Date: 19-Jan-2021  
Order Date: 13-Jan-2021

**Order #: 2103308**

This Certificate of Analysis contains analytical data applicable to the following samples as submitted:

Paracel ID	Client ID
2103308-01	BH-P01
2103308-02	BH-P02
2103308-03	Dup WA

Approved By:

Alex Enfield, MSc  
Lab Manager

Certificate of Analysis

Report Date: 19-Jan-2021

Client: Wood Environment & Infrastructure (Thorold)

Order Date: 13-Jan-2021

Client PO:

Project Description: OESAM2008/2000

**Analysis Summary Table**

Analysis	Method Reference/Description	Extraction Date	Analysis Date
PHC F1	CWS Tier 1 - P&T GC-FID	15-Jan-21	18-Jan-21
PHCs F2 to F4	CWS Tier 1 - GC-FID, extraction	18-Jan-21	19-Jan-21
REG 153: Metals by ICP/MS, water	EPA 200.8, ICP-MS	15-Jan-21	15-Jan-21
REG 153: VOCs by P&T GC-MS	EPA 624 - P&T GC-MS	15-Jan-21	18-Jan-21

Certificate of Analysis

Report Date: 19-Jan-2021

Client: Wood Environment &amp; Infrastructure (Thorold)

Order Date: 13-Jan-2021

Client PO:

Project Description: OESAM2008/2000

## Summary of Exceedances

(If this page is blank then there are no exceedances)

Only those criteria that a sample exceeds will be highlighted in red

**Regulatory Comparison:**

Paracel Laboratories has provided regulatory guidelines on this report for informational purposes only and makes no representations or warranties that the data is accurate or reflects the current regulatory values. The user is advised to consult with the appropriate official regulations to evaluate compliance. Sample results that are highlighted have exceeded the selected regulatory limit. Calculated uncertainty estimations have not been applied for determining regulatory exceedances. Regulatory limits displayed in brackets, (), applies to medium and fine textured soils.

**Criteria:**

Client ID	Analyte	MDL / Units	Result	Reg 153/04 (2011)-Table 1 Groundwater
BH-P01	Uranium	0.2 ug/L	24.6	8.9 ug/L
BH-P02	Silver	0.2 ug/L	0.4	0.3 ug/L
Dup WA	Silver	0.2 ug/L	0.4	0.3 ug/L

*CCME PHC additional information:*

- The method for the analysis of PHCs complies with the Reference Method for the CWS PHC and is validated for use in the laboratory. All prescribed quality criteria identified in the method has been met.
- F1 range corrected for BTEX.
- F2 to F3 ranges corrected for appropriate PAHs where available.
- The gravimetric heavy hydrocarbons (F4G) are not to be added to C6 to C50 hydrocarbons.
- In the case where F4 and F4G are both reported, the greater of the two results is to be used for comparison to CWS PHC criteria.
- When reported, data for F4G has been processed using a silica gel cleanup.

Any use of these results implies your agreement that our total liability in connection with this work, however arising, shall be limited to the amount paid by you for this work, and that our employees or agents shall not under any circumstances be liable to you in connection with this work.

**APPENDIX C**  
**LIMITATIONS**

## LIMITATIONS

1. The work performed in the preparation of this report and the conclusions presented are subject to the following:
  - (a) The Standard Terms and Conditions which form a part of Wood's Wood's proposal (POESAM2040) and authorized by the Client on June 18, 2020;
  - (b) The Scope of Services;
  - (c) Time and Budgetary limitations as described in our proposal; and,
  - (d) The Limitations stated herein.
2. No other warranties or representations, either expressed or implied, are made as to the professional services provided under the terms of our proposal, or the conclusions presented.
3. The conclusions presented in this report were based, in part, on visual observations of the site and attendant structures. Our conclusions cannot and are not extended to include those portions of the site or structures which were not reasonably available, in Wood's opinion, for direct observation.
4. The environmental conditions at the site were assessed, within the limitations set out above, having due regard for applicable environmental regulations as of the date of the inspection. A review of compliance by past owners or occupants of the site with any applicable local, provincial or federal by-laws, orders-in-council, legislative enactments and regulations was not performed.
5. The site history research included obtaining information from third parties and employees or agents of the owner. No attempt has been made to verify the accuracy of any information provided, unless specifically noted in our report.
6. Where testing was performed, it was carried out in accordance with the terms of our proposal providing for testing. Other substances, or different quantities of substances testing for, may be present on site and may be revealed by different of other testing not provided for in our proposal.
7. Because of the limitations referred to above, different environmental conditions from those stated in our report may exist. Should such different conditions be encountered, Wood must be notified in order that it may determine if modifications to the conclusions in the report are necessary.
8. The utilization of Wood's services during the implementation of any remedial measures will allow Wood to observe compliance with the conclusions and recommendations contained in the report. Wood's involvement will also allow for changes to be made as necessary to suit field conditions as they are encountered.

9. This report is for the sole use of the party to whom it is addressed unless expressly stated otherwise in the report or proposal. Any use which any third party makes of the report, in whole or in part, or any reliance thereon, or decisions made based on any information or conclusions in the report, is the sole responsibility of such third party. Wood accepts no responsibility whatsoever for damages or loss of any nature or kind suffered by any such third party as a result of actions taken or not taken or decisions made in reliance on the report or anything set out therein.
10. This report is not to be given over to any third party for any purpose whatsoever without the written permission of Wood Environment and Infrastructure Solutions.
11. Unless stated otherwise in the Closure Section of this Report, provided that the report is still reliable, and less than 12 months old, Wood may issue a third-party reliance letter to parties CLIENT identifies in writing, upon payment of the then current fee for such letters. All third parties relying on Wood's report, by such reliance agree to be bound by our proposal and Wood's standard reliance letter. Wood's standard reliance letter indicates that in no event shall Wood be liable for any damages, howsoever arising, relating to third-party reliance on Wood's report. No reliance by any party is permitted without such agreement.
