

a second is all it takes

RESOURCES FOR THE OLDER DRIVER

Driver error is the main cause of serious and fatal motor vehicle conditions in the Niagara region for all age groups.¹ For drivers over 60 years old, it represents 96% of all serious and fatal crashes, whereas for the 51 to 60 age group, driver error is indicated in 67% of these crashes. The vast majority of older drivers continue to be safe to drive and are often unfairly characterized by the media. Current research indicates that it is not age itself, but the increasing prevalence of medical and functional conditions that affect driving ability.²

Numerous medical conditions are associated with crashes such as vision and movement (arthritis, pain), seizures, cerebral-vascular, cardiac, diabetes, psychiatric, dementia, respiratory. These conditions increase with age. Even the best drivers can become unsafe when medical conditions change their abilities. Health conditions are extremely personal. But road safety concerns everyone – motorists, families, physicians, governments – in:

- Extending the safe driving period for all drivers
- Understanding older drivers with medical and functional impairments and
- Lessening the impact of driving cessation in those who must stop

To learn more about...

How your condition/medication impacts driving: Speak to your physician.

Driver Refresher Courses:

- **Drive Wise:** Ontario Provincial Police, Phone: 905-356-1311 or 1-888- 310-1122 www.drivewise.ca
